DEPARTMENT VISION

To provide valuable resources for Industry and Society through research and excellence in Electronics and Telecommunication Engineering.

DEPARTMENT MISSION

M1: Educating students with requisite technical expertise to meet the growing challenges of the industry

M2: Promoting research through constant interaction with research bodies and various Industries

M3: Equipping students with fundamental subject knowledge to enable them for continuing education.

Program Outcomes (PO's)

PO1	Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Ethics: Apply ethical Principles and commit to professional ethics, human values, diversity and inclusion; adhere to national and international Laws.
PO8	Individual and collaborative teamwork: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO9	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO10	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO11	Lifelong learning: Recognize the need for and have the preparation and ability for i) Independent and lifelong learning ii) Adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

Dean Academics

Chairman, Academic Council

Program Educational Objectives (PEOs)

- PEO1 – Graduates would be able to provide the engineering solution with strong research capabilities in the areas of Electronics and Telecommunication Engineering
- PEO2 – Graduates would be able to achieve good career using improved skill sets in the field of Electronics and Telecommunication.
- PEO3 – Graduates will possess a strong fundamental knowledge base and proficiency in circuit analysis and simulation in the field of electronics.

Program Specific Outcomes (PSOs)

- PSO1 – Apply knowledge to use modern tools and techniques for Electronics and Telecommunication Engineering.
- PSO2 – Integrate communication systems, signal processing techniques and multidisciplinary knowledge to develop sustainable engineering solutions.

Department of Electronics & Telecommunications Engineering

Credit Framework under Four-Year UG Engineering Programme with Multiple Entry and Multiple Exit options:

- The Four-year Bachelor's Multidisciplinary Engineering Degree Programme allows the students to experience the full range of holistic and multidisciplinary education in addition to a focus on the chosen major and minors as per their choices and the feasibility of exploring learning from different institutions.
- The minimum and maximum credit structure for different levels under the Four-year Bachelor's Multidisciplinary Engineering UG Programme with multiple entry and multiple exit options are as given below.

Credit Framework

Levels	Qualification Title	Credit Requirement		Semester	Year
		Minimum	Maximum		
4.5	One Year UG Certificate in Engineering/ Technology	40	44	2	1
5.0	Two Year UG Diploma in Engineering/ Technology	80	88	4	2
5.5	Three-Year Bachelor's Degree in vocation (B. Voc)	120	132	6	3
6.0	(B.E./ B.Tech. or Equivalent) in Engg. / Tech. with Multidisciplinary Minor	160	176	8	4
6.0	4-Year Bachelor's degree (B.E./ B.Tech. or Equivalent) in Engg. / Tech.-Honors and Multidisciplinary Minor	180	194	8	4
6.0	4-Year Bachelor's degree (B.E./ B.Tech. or Equivalent) in Engg. /Tech.- Honors with Research and Multidisciplinary Minor	180	194	8	4
6.0	4-Year Bachelor's degree (B.E./ B.Tech. or Equivalent) in Engg./Tech.- Major Engg. Discipline with Double Minors (Multidisciplinary and Specialization Minors)	180	194	8	4

- There are multiple exit options at each level. Students will be given a specific Qualification mentioned in the table depending on the level at which he/she decides to have an exit. Ex. If a student decides to exit after completion of two years (level 5.0) of the program, he will be given a Diploma in Engineering with specific exit conditions mentioned in the syllabus of the specific branch. He/she can rejoin the program with the multiple entry option at the level next where he/she chose to exit previously. (Students can join at level 5.5 if they completed level 5.0 previously at the time of exit).
- Minimum credit requirements of each level are mentioned in the credit framework table.
- There are 4 distinct options available at level 6.0.

MASTER COPY

Chairman, BoS

Dean Academics

Chairman, Academic Council

- The first one is the basic level 6.0 option where a minimum of 160- maximum 176 credits are mandatory, which can be completed as per the Semester-wise Credit distribution structure mentioned in the table given below.

Here, the Bachelor's Engineering Degree in chosen Engg. / Tech. Discipline with a multidisciplinary minor (min.160-max.176 Credits), i.e. "B. Tech in Electrical Engineering" (160-176 credits) enables students to take up five to six or required additional courses of 14 credits in the discipline other than Electrical Engineering distributed over semesters III to VIII. Here, in the case of "B. Tech in Electrical Engineering" (160-176 credits), students are supposed to take up 50% or more courses to complete the 50% or more credits (from the assigned 14 credits) of the Engineering minor. The remaining courses to complete the assigned 14 credits can be covered from other disciplines' minor buckets.

- The remaining three level 6.0 options are the advanced options where the student is allowed to get extra qualification by earning some extra credits (18-20 extra credits). These three options are given below:
- Level 6.0: The Bachelor's Engineering Degree with Honours in chosen Major Engg./ Tech. Discipline i.e. in Electrical Engineering with Honours with Multidisciplinary Minor (180-194 credits) enables students of Electrical Engineering to take up five to six additional courses of 18 to 20 credits in the Electrical Engineering discipline distributed over semesters III to VIII. The decision regarding the mechanism of distribution of these 18-20 credits over semesters III to VIII, which are over and above the min.160-max.176 Credits prescribed for the duration of four years will be taken by Academic Authorities. Students must have a CGPA equal to or greater than 7.5 at the end of second semester to go for this option.
- Level 6.0: The Bachelor's Engineering Degree with Research in i.e. in Electrical Engineering with Research with Multidisciplinary Minor (180-194 credits) enables students of Electrical Engineering to take up a research project of 18 to 20 credits in the Electrical Engineering discipline distributed over semesters VII to VIII. Student must have CGPA equal to or greater than 7.5 at the end of sixth semester to go for this option.
- Level 6.0: The Bachelor's Engineering Degree in chosen Engg./ Tech. Discipline with Double Minor (Multidisciplinary and Specialization Minor, 180-194 credits), i.e. "B. Tech in Electrical Engineering with other selected discipline in Engineering (as MDM) with Specialization Minor in Computer Engineering" (180-194 credits) enables students to take up five-six additional courses of 14 credits in the discipline other than Electrical for completion of multidisciplinary minor) and 18 to 20 extra credits in the Computer Engineering discipline distributed over semesters III to VIII. Here, the other selected discipline in Engineering should be different from Specialization Minor i.e. Computer Engineering. This enables students to take up five-six or required additional courses of 18 to 20 credits in the Computer Engineering discipline distributed over semesters III to VIII, which are over and above the min.160-max.176 Credits. The decision regarding the mechanism of distribution of these 18-20 credits over semesters III to VIII, prescribed for the duration of four years will be taken by Academic Authorities. Students must have a CGPA equal to or greater than 7.5 at the end of second semester to go for this option.

• 4-Year bachelor's degree (B.E./ B.Tech. or Equivalent) in Engineering/ Technology - Major Engineering Discipline with Double Minors (Multidisciplinary and Specialization Minors) • Major + MDM + Specialized Minor = 162+14+18 = 194 Credits • Students with a minimum CGPA of 7.5 without backlog courses at the end of the Second semester and should have earned 42 credits are eligible for admission to the UG Bachelor's Degree with Double Minor.										194

Note:

1. Multiple entry & exit criteria will be in accordance with the AICTE/UGC/DTE/NEP-2020 guidelines.
2. For Audit course (AU), participation is mandatory but not included in Grade calculations.
3. The Honors and Specialization Minor (Double Minor) offered by the program is exclusively for students of that program. Only students with a minimum CGPA of 7.5 and no backlogs at the end of the Second Semester are eligible. Students must maintain a minimum CGPA of 7.5 and remain without backlogs throughout the program. To earn the Honors and Specialization Minor (Double Minor), students must complete all the courses offered by the program.
4. Honors and Specialization Minor (Double Minor) courses shall be offered through the SWAYAM/NPTEL online learning platform. The Board of Studies (BoS) shall identify, approve, and recommend the course based on its relevance to the program curriculum, academic quality, and prevailing industry standards.

Course Title: Engineering Mathematics I Course Code:CK261001 Course Category: BSC		
Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: 01 hrs / week	CA-2	10 Marks
Credits: 04	MSE	20 Marks
Semester: First Year (Semester I)	ESE	60 Marks
Course Prerequisite: • Basic Algebra & Trigonometry – Equations, identities, functions. • Basics of Calculus – Derivatives and simple integration. • Basics of Matrix – Matrix types, operations and solving simple linear systems. Vector algebra (dot and cross product)		
Course Description: This course covers essential topics in engineering mathematics, including matrices, eigenvalues, partial differentiation, vector calculus and multiple integrals. It focuses on solving linear systems, optimization and applying calculus to real-world problems like area and volume calculation. These mathematical tools form the backbone of many engineering fields and help to develop logical problem-solving skills.		
Course Objectives: 1.To develop a strong foundation in matrix algebra and its applications in solving systems of equations and introduce the concepts of eigenvalues and eigenvectors and their role in engineering problems. 2.To understand partial differentiation and apply it to functions of several variables. 3.To apply multiple integrals in calculating areas, volumes and other engineering-related quantities. 4.To develop the ability to analyze and solve engineering problems using vector calculus concepts like gradient, divergence, curl, and vector integration.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall the basic concepts related to matrices, calculus and vector analysis.	Remember (Level 1)
CO2	Compute solutions using the fundamental concepts of linear algebra, multivariable and vector calculus.	Understand (Level 2)
CO3	Solve mathematical problems based on concepts related to matrices, multivariable and vector calculus.	Apply (Level 3)
CO4	Analyze mathematical problems by identifying and applying appropriate concepts from matrices, calculus and vector analysis.	Analyze (Level 4)

Course Title: Applied Science I		
Course Code:CK261002		Course Category: BSC
Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 03	MSE	20 Marks
Semester: First Year (Semester I)	ESE	60 Marks
Course Prerequisite: - Basic knowledge of secondary and higher Physics - Basic knowledge of algebra and trigonometry.		
Course Description: Physics is the backbone of all engineering disciplines. Physics is not just important in engineering—it's essential. It empowers engineers to understand the world, design with precision, innovate responsibly and build solutions that improve lives. The understanding of semiconductor physics forms the foundation for electronics design and analysis. The Knowledge of quantum mechanics and solid-state physics is essential for modern device fabrication like MOSFETs and ICs. Laser and photonics applications are critical in fiber optics, sensors and communication systems.		
Course Objectives: - To understand, classify signals and systems based on their characteristics and perform basic operations on signals. - To study Linear Time Invariant (LTI) Systems. - To provide the analysis of spectral properties of periodic and aperiodic signals. - To prepare students for advanced topics in communication, control systems, and signal processing.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall the fundamental principles, laws, and basic concepts of classical Physics and modern Physics.	Remember (Level 1)
CO2	Interpret the behavior of macroscopic & microscopic objects using fundamentals of waves, optics and semiconductors.	Understand (Level 2)
CO3	Describe the properties of functional materials and the fundamentals of quantum mechanics, electromagnetism relevant to engineering systems.	Understand (Level 2)
CO4	Use fundamental principles and the laws of wave motion, optics, semiconductor physics & quantum mechanics in various engg. applications.	Apply (Level 3)
CO5	Apply fundamental principles of physics to perform experiments on optics, nuclear physics and material science for skill development through hands-on practice.	Apply (Level 3)
CO6	Examine the experimental behavior of physical systems based on wave dynamics and optical effects.	Analyze (Level 4)

Course Title: Programming for Problem Solving		
Course Code: CK261102		Course Category: ESC
Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 03	MSE	20 Marks
Semester: First Year (Semester I)	ESE	60 Marks
Course Prerequisite: • Basic Computer Literacy • Logical Thinking and Problem-Solving Skills • Basic Mathematics Knowledge.		
Course Description: This course provides a comprehensive introduction to programming using the C language. It aims to develop problem-solving skills essential for engineering students through the design of algorithms and their implementation in C. The course begins with foundational programming concepts and progressively covers control structures, functions, arrays, strings, pointers, structures, and file handling. Emphasis is placed on writing efficient code, understanding memory management, and applying structured programming techniques.		
Course Objectives: 1. To introduce fundamental programming concepts such as algorithms, flowcharts, and C program structure. 2. To develop the ability to use control flow statements, functions, and recursion for problem-solving in C. 3. To enable students to work with arrays, strings, pointers, and structures for handling data efficiently. 4. To impart skills in file handling techniques for data storage, retrieval, and error handling in C 5. To apply C programming constructs to solve computational problems through practical lab sessions.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall basic concepts of programming in C language.	Remember (Level 1)
CO2	Explain C programming elements and file-handling concepts	Understand (Level 2)
CO3	Use the C programming elements to develop efficient C programs and perform input/output operations in file.	Apply (Level 3)
CO4	Analyze program logic, memory usage, and file operations in C to ensure correctness and optimize performance.	Analyze (Level 4)
CO5	Evaluate alternative C programming solutions based on correctness, efficiency, memory utilization, modularity, and appropriate use of programming constructs.	Evaluate (Level 5)
CO6	Design and develop modular C programs using functions, arrays, strings, pointers, structures, and file handling to solve real-world computational problems.	Create (Level 6)

Course Title: Engineering Mechanics		
Course Code:CK261104		Course Category: ESC
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 02	MSE	20 Marks
Semester: First Year (Semester I)	ESE	60 Marks
Course Prerequisite: - Fundamentals of Physics - Basics of Trigonometry, Geometry and Mathematical Rules and Regulations		
Course Description: Engineering Mechanics is the branch of Physics which deals with the study of the effect of force systems acting on a particle or a rigid body which may be at rest or in motion with consideration of different laws, principles, theorem and mathematical rules and regulations. Engineering Mechanics is considered a basic subject for engineering students irrespective of branches; study of this subject helps develop the thinking, analytical ability and imaginative skill of the student. Engineering Mechanics is the basic subject which supports many other subjects like Strength of Materials, Theory of Machines, Kinetics of Machines, Dynamics of Machines, Fluid Mechanics, Fluid Machines, Machine Design, Tool Design, etc. to apply the engineering concept for manufacturing of various products and projects such as automobile, aircrafts, electric motors, robots, construction of roadways, railways, bridges, dams, power transmission towers, projectile of missiles, satellites and many more		
Course Objectives: - To study the resolving forces and moments for a given force system - To locate Centre of gravity and Moment of Inertia of plane surfaces - To describe fundamental Laws and Conditions of static and dynamic equilibrium for given force system. - To compute the different motion characteristics of a body/particle without considering force causing motion		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recognize different fundamentals of Engineering Mechanics	Remember (Level 1)
CO2	Discuss effect of forces on rigid body / particle in statics and dynamics considering C.G. & M.I.	Understand (Level 2)
CO3	Solve problems on rigid bodies/particles subjected to various with and without consideration of forces in static and dynamic conditions.	Apply (Level3)
CO4	Examine beam reactions, frictional effects and composite areas under equilibrium conditions.	Analyze (Level 4)

Course Title: Applied Science I Lab		
Course Code:CK261003		Course Category: BSC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 hrs/ week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	MSE	20 Marks
Course Prerequisite: • Awareness of common lab equipment like Vernier calipers, micrometers etc. • Knowledge of physical quantities, units and measurement techniques • Ability to interpret and plot graphs.		
Course Description: Physics is the backbone of all engineering disciplines. Physics is not just important in engineering, it's essential. It empowers engineers to understand the world, design with precision, innovate responsibly and build solutions that improve lives. The understanding of semiconductor physics forms the foundation for electronics design and analysis. The Knowledge of quantum mechanics and solid-state physics is essential for modern device fabrication like MOSFETs and ICs. Laser and photonics applications are critical in fiber optics, sensors and communication systems.		
Course Objectives: 1. To provide a firm grounding in the basic physics principles and concepts to resolve many Engineering and Technological problems. 2. To study the fundamentals of wave motion and optics. 3. To introduce the fundamental principles of quantum mechanics, enabling students to study the behaviour of macroscopic & microscopic objects. 4. To impart fundamental knowledge of dielectric and superconducting materials, focusing on their properties and behavior. 5. To develop an understanding of the properties and behavior of magnetic materials and the principles of electrodynamics.		

Course Outcomes: Course outcomes of laboratory are mentioned in theory course outcome.

Assessment	
CA-I (a)	Based on practical: Sr. No. 1 to 4
CA-II (b)	Based on practical: Sr. No. 5 to 8

Course Code: CK261105		Course Category: ESC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	ESE	20 Marks
Course Prerequisite: - Students should possess fundamental knowledge of basic science and mathematics from secondary education. - Basic understanding of tools, safety protocols, and workshop processes. - Basic understanding of measurement, marking, material handling, and elementary fabrication.		
Course Description: This course introduces first-year engineering students of circuit branches (CSE, AI/ML, E&TC) to interdisciplinary workshop practices integrating electronics, mechanical fabrication, and safety. Students will gain hands-on experience in handling tools, following safety protocols, and fabricating support systems like racks, casings, and stands using fitting, carpentry, and sheet metal techniques. The course also includes foundational soldering skills necessary for circuit prototyping, enabling students to bridge physical hardware with digital systems.		
Course Objectives: - To inculcate awareness of workshop safety norms, including PPE, ESD protection, and safe handling practices. - To train students in measuring, marking, and assembling metal brackets and peripheral mounting frames. - To develop carpentry skills for fabricating ergonomic stands and enclosures used in IT labs and smart systems. - To introduce sheet metal operations for constructing functional CPU or device casings. - To impart soldering techniques through the creation of basic circuits and hands-on hardware integration.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall fundamental workshop safety guidelines, correct use of personal protective equipment (PPE), basic first aid awareness, and safe handling and storage of tools and materials.	Remember (Level 1)
CO2	Explain the objectives, principles, and standard procedures of basic workshop processes such as measuring, cutting, joining, assembling, and finishing.	Understand (Level 2)
CO3	Apply foundational fabrication and assembly skills to create simple functional products or structures using appropriate tools, equipment, and techniques.	Apply (Level 3)

Course Title: Programming for Problem Solving Lab Course Code: CK261106 Course Category: ESC		
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 hrs/ week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	ESE	20 Marks
Course Prerequisite: • Basic Computer Literacy • Logical Thinking and Problem-Solving Skills • Basic Mathematics Knowledge.		
Course Description: This course provides a comprehensive introduction to programming using the C language. It aims to develop problem-solving skills essential for engineering students through the design of algorithms and their implementation in C. The course begins with foundational programming concepts and progressively covers control structures, functions, arrays, strings, pointers, structures, and file handling. Emphasis is placed on writing efficient code, understanding memory management, and applying structured programming techniques.		
Course Objectives: 1. To introduce fundamental programming concepts such as algorithms, flowcharts, and C program structure. 2. To develop the ability to use control flow statements, functions, and recursion for problem-solving in C. 3. To enable students to work with arrays, strings, pointers, and structures for handling data efficiently. 4. To impart skills in file handling techniques for data storage, retrieval, and error handling in C 5. To apply C programming constructs to solve computational problems through practical lab sessions..		

Course Outcomes: Course outcomes of laboratory are mentioned in theory courseoutcome.

Assessment	
CA-I (a)	Based on Practical: Sr. No. 01 to 04
CA-2 (b)	Based on Practical: Sr. No. 05 to 08

Course Code:GE261601		Course Category: SC-SEC
Teaching Scheme	Examination Scheme	
Lectures: 02Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	ESE	20 Marks
Course Prerequisite: • Willingness to participate actively in oral and group communication tasks. • Basic understanding of English language (reading, writing, speaking)..		
Course Description: This course is designed to develop essential professional and interpersonal skills in students through interactive and activity-based learning. It emphasizes spoken English, confidence building, and real-world communication situations such as introductions, interviews, debates, and presentations. Through practical exposure to public speaking, storytelling, group discussions, and more, students will enhance their communication abilities and become effective, confident speakers capable of navigating academic and professional environments.		
Course Objectives: 1. To help students recall essential terminology, formats, and structures used in oral communication. 2. To familiarize students with the foundational principles of effective oral communication in academic and professional settings. 3. To provide students with opportunities to practice and apply communication strategies through structured speaking activities. 4. To develop students' ability to design and deliver creative and context- appropriate oral communication tasks.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
C01	Recall key concepts and techniques involved in basic oral communication tasks	Remember (Level1)
C02	Explain the principles and techniques of effective oral communication in personal, academic, and professional contexts.	Understand (Level2)
C03	Apply appropriate speaking strategies in activities such as group discussions, interviews, and presentations.	Apply(Leve l3)
C04	Design and deliver structured oral communication tasks using appropriate style, tone, and language	Create (Level6)

Course Title: Do It Yourself I		
Course Code:GE261801		Course Category: ELC
Teaching Scheme	Examination Scheme	
Lectures: 02 Hours/Week	CA-I	25 Marks
Credits: AU	CA-II	25 Marks
Semester: First Year (Semester I)	ESE	--
Course Prerequisite: None. An open mind and willingness to work individually and in a diverse team is essential.		
Course Description: This hands-on, introductory laboratory course exposes engineering students to the core ecosystems of modern engineering: Digital Fabrication, Robotics & Automation, Artificial Intelligence, and Internet of Things (IoT). Students transition from passive consumers of technology to active creators by learning to safely navigate real-world laboratory tools, software environments, and physical hardware. Through micro-projects, troubleshooting tasks, and an intensive capstone tinkering challenge, students develop cross-disciplinary engineering design thinking, spatial visualization, and technical collaborative skills vital for succeeding in advanced core engineering streams.		
Course Objectives: 1. Develop hands-on skills in digital fabrication and rapid prototyping using modern MakerSpace technologies. 2. Develop and assemble basic electronic circuits and design simple PCB layouts. 3. Build and program basic robotic and IoT-based systems for real-world applications. 4. Apply fundamental Artificial Intelligence and computer vision techniques to practical problems. 5. Integrate multidisciplinary technologies to develop functional prototypes through a hands-on, problem- solving approach.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Describe and Demonstrate safety practices in a rapid prototyping laboratory to ensure safe working conditions.	Remember (Level1)
CO2	Develop simple components using CAD, slicing, and digital fabrication techniques for rapid prototyping.	Understand (Level 2)
CO3	Execute spatial digitization, reverse engineering, and subtractive manufacturing operations for product replication.	Apply (Level 3)
CO4	Examine and Perform basic programming, sensor interfacing, robotics, IoT, artificial intelligence, and computer vision applications..	Analyze (Level 4)
CO5	Synthesize multidisciplinary hardware, electronics, and digital technologies to develop functional prototypes within defined constraints.	Create (Level 6)

Teaching Scheme	Examination Scheme	
Lectures: 02 Hours/Week	CA-1	15 Marks
Credits: 01	CA-1	15 Marks
Semester: First Year (Semester I)	MSE	20 Marks
Course Prerequisite: None. An open mind and willingness to work in diverse teams are essential		
Course Description: This course introduces students to the fundamentals of platform-based development using Arduino microcontrollers, basic electronics, sensor-actuator interfacing, and simple mechanical mechanisms. Through a hands-on, project-based approach, students explore embedded systems, basic programming logic, and circuit building while integrating sensors and actuators with wireless communication modules. Additionally, the course familiarizes students with real-world mechanical linkages and their applications. By the end of the course, students will be able to build and troubleshoot simple, intelligent physical systems by combining electronics, programming, and mechanical design elements.		
Course Objectives: 1. To understand the basics of embedded systems and microcontrollers. 2. To develop skills in Arduino programming and circuit interfacing. 3. To integrate sensors, actuators, and communication modules in simple projects. 4. To foster creativity, problem-solving, and teamwork through practical engineering challenges..		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall and identify basic components of embedded systems and Arduino hardware platforms	Remember (Level 1)
CO2	Explain the functionality of Arduino software platforms and basic electronic components.	Understand (Level 2)
CO3	Construct and test simple Arduino circuits using LEDs, switches, and sensors.	Apply (Level 3)
CO4	Analyze and troubleshoot embedded system circuits and Arduino programs for faults.	Analyze (Level 4)
CO5	Design and develop a complete embedded system integrating sensors, actuators, and communication modules for a specific application.	Create (Level 6)

Course Title: Students Club Activities		
Course Code: GE262902		Course Category: LLC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	25 Marks
Credits: 01	CA-II	25 Marks
Semester:	ESE	-
Course Prerequisite: Active Membership in Any Institute-Approved Student Club		
Course Description: This co-curricular course provides a professional platform for students to foster leadership, teamwork, and specialized domain skills through active engagement in Institute-approved student clubs. Designed as a flexible workplace simulation, the curriculum accommodates diverse student roles by focusing on the core competencies of organizing and/or participating in campus-wide technical, cultural, or social initiatives. Students learn to navigate peer-to-peer collaboration, manage timelines, and achieve targeted outcomes, turning active extracurricular involvement into verifiable workplace readiness and project management experience.		
Course Objectives: 1. To instruct students in the governance, compliance guidelines, and operational frameworks of managed student organizations. 2. To train students in the practical workflows of event planning, resource optimization, task execution, or technical skill application. 3. To facilitate hands-on experience in cross-functional collaboration, communication, and risk mitigation through live club initiatives. 4. To establish professional documentation habits through the evaluation of outcomes, logbooks, and structured activity reporting.		

Course Outcomes:		
COs	After completion of the course: Students will be able to	Bloom's Level
CO1	Interpret the institutional governance, compliance workflows, and safety frameworks required by the Student Affairs Department to run or join campus initiatives.	Understand (Level 2)
CO2	Apply specialized domain-specific skills (whether technical, creative, or social) to deliver structured project milestones or performances within a club ecosystem.	Apply (Level 3)
CO3	Collaborate within professional peer hierarchies, managing shared resources, event timelines, and stakeholder communication to execute club objectives.	Apply (Level 3)
CO4	Formulate comprehensive, data-driven post-activity portfolios including financial logs, attendance metrics, and official reports	Create (Level 6)

Assessment	
CA-I (a)	Organization and/or participation in the Club Activities
CA-II (b)	Organization and/or participation in the Club Activities

Students Club Activities
Students are expected to maintain active membership in at least one Institute-approved student club, engaging in initiatives that can range from regular weekly sessions to major one-off events. These club activities can span diverse domains, including technical workshops, cultural performances, and social responsibility campaigns. To ensure academic and administrative compliance, all events must be formally approved by the Student Affairs Department and secure all other necessary institutional permissions before execution. Throughout the semester, students must successfully organize and/or participate in these scheduled club activities to develop real-world leadership and teamwork skills. To receive academic credit for the course, students are required to submit verifiable proof of their involvement when requested. This documentation may include official event reports, attendance records, completion certificates, or activity logbooks, providing clear evidence of their direct contributions.

Course Title: Engineering Mathematics II		
Course Code:CK262004		Course Category: BSC
Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 03	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: • Basic Calculus: Knowledge of differentiation, integration and their applications in solving basic mathematical problems. • Algebra: Proficiency in solving linear and quadratic equations, understanding polynomials and working with basic mathematical operations. • Trigonometry: Understanding trigonometric functions, identities and their applications, including knowledge of sine, cosine, and tangent functions.		
Course Description: This course provides an introduction to the fundamental concepts of ordinary differential equations, complex numbers and Fourier analysis. Topics include first-order differential equations, linear differential equations with constant coefficients, applications in engineering, complex number theory, Fourier series and Fourier transforms. The course emphasizes problem-solving techniques used in mechanical, civil and electrical engineering applications.		
Course Objectives: 1. To introduce methods for solving first-order differential equations and their applications in engineering. 2. To understand and solve linear differential equations with constant coefficients. 3. To apply linear differential equations to engineering problems in mechanical and civil engineering. 4. To study complex numbers, their properties, and applications in engineering. 5. To learn Fourier series expansion and its application to periodic functions. 6. To understand Fourier transforms and their use in analysing functions in engineering applications.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall the concepts related to ordinary differential equations, imaginary numbers and Fourier analysis.	Remember (Level 1)
CO2	Compute the mathematical problems based on the fundamental concepts of differential calculus, complex numbers, Fourier analysis.	Understand (Level 2)
CO3	Apply the appropriate techniques from ordinary differential equations, complex numbers and Fourier analysis to solve mathematical problems in engineering.	Apply (Level 3)
CO4	Analyze the concepts of differential calculus, complex quantities and Fourier analysis involving in engineering problems across various domains.	Analyze (Level 4)

Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 03	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: Chemistry course at secondary and higher secondary leve.		
Course Description: Chemistry is the backbone of all Engineering disciplines. Chemistry is not just important in Engineering, it's essential. Chemistry is an imperative part of every degree program in Engineering & Technology. This course is generally incorporated in the first-year syllabus of Bachelor of Technology degree in Engineering, and it is structured in a manner that its different theoretical concepts are studied along with their practical applications. This course cover topics like Water technology, Fuels, High polymers, Corrosion and its control, Electrochemical Energy Systems and Instrumental methods of Analysis along with practical laboratory experiments. The goal is to help students to understand the chemical principles behind various engineering materials, processes, and Systems.		
Course Objectives: - To understand the technology involved in analysis and improving quality of water. - To study conventional fuels, their determination and analysis. - To understand the properties and applications of various engineering materials, such as polymers. - To understand Corrosion mechanisms and methods of prevention for corrosion control. - To study the basic concepts of Electrochemical Energy Systems and to build awareness about batteries. - To familiarize students with instrumental methods for qualitative and quantitative analysis..		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall the basic concepts of water treatment, fuels, polymers, corrosion, electrochemical energy systems, and instrumental methods of analysis.	Remember (Level 1)
CO2	Describe the principles and processes involved in water softening, coal analysis, polymer preparation, corrosion mechanisms, electrochemical energy systems and instrumental methods of analysis.	Understand (Level 2)
CO3	Interpret the concepts and processes involved in water treatment, fuels and ectrochemical energy sources, highpolymers, corrosion, and instrumental methods of analysis.	Understand (Level 2)

MASTER COPY

Course Contents

Unit 1	Water Technology Introduction, Hardness, types of Hardness, Disadvantages of hard water for domestic and industrial use, Numerical based on hardness, determination of hardness of water by EDTA method, Water softening methods: Zeolite method and Ion Exchange method.	6 Hours
Unit 2	Fuels Introduction, Classification of fuels, Calorific value, higher calorific value (HCV) & Lower calorific value (LCV), Characteristics of good fuels, Determination of calorific value of fuel by Bomb calorimeter, Numerical based on bomb Calorimeter. Analysis of Coal: Proximate analysis, Refining of crude oil.	6 Hours

MASTER COPY

Chairman, BoS

Unit 3	High Polymers Introduction, Polymerization and its types, thermo-softening and thermosetting plastics, preparation, properties and uses of: Polymethyl methacrylate (PMMA), Urea formaldehyde resin, styrene-butadiene rubber, conducting polymers its types and applications, Introduction to polymer materials for 3-D printing.	6 Hours
Unit 4	Corrosion and its Control Introduction, types of corrosion- Chemical and Electrochemical corrosion, mechanism of electrochemical corrosion, factors influencing rate of corrosion, Prevention of corrosion by galvanising, tinning and cathodic protection method, Introduction to chemical etching.	6 Hours
Unit 5	Electrochemical Energy Systems Introduction, Basic concepts- Specific resistance, specific conductance, equivalent conductance, molar conductance, cell constant, Numerical based on specific conductance, equivalent conductance, molar conductance and cell constant, Conductometric titrations, Reference electrode- glass electrode, Batteries: classification, lithium-ion battery, Fuel cell: Methanol-oxygen fuel cell.	6 Hours
Unit 6	Instrumental Methods of Analysis Introduction, Lambert-Beer's law, Principle, working and instrumentation of: Ultraviolet (UV) - visible spectroscopy, Flame photometry, Infra-red (IR) spectroscopy, pH metry, Chromatography: Classification, Thin layer chromatography.	6 Hours

Course Title: Engineering Graphics		
Course Code:GE262101		Course Category: ESC
Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 03	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: Knowledge of Geometry (Linear and angular), Coordinate Geometry. Basic Mathematics.		
Course Description: Engineering Graphics is a basic course for all undergraduate engineering programs. This course is introduced to provide basic understanding of the fundamentals of Engineering Drawing, mainly visualization, graphic theory, standards and conventions of drawing, the tools of drawing and use of drawing in engineering applications. A picture speaks thousands of words. A message conveyed by a picture is much more effective than a message conveyed by words. The human being used the language of drawing to convey their ideas, thoughts, feelings, emotions since before the start of civilization. With development in science and technology humans felt the need for standardized drawing that it could be understood universally. This standardized language was then termed as Engineering Drawing.		
Course Objectives: 1. To Know and Understand the Concepts of Projection of Points, Lines, Planes, Solids, and Development of Surfaces. 2. To Construct 2D and 3D views of objects. 3. To communicate effectively in Engineering Environment.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Familiarize the geometrical fundamental concepts, BIS standard, drafting tools and theory of projection for construction of different geometries and engineering objects.	Remember (Level 1)
CO2	Interpret the importance of reference planes while drawing the front view and top view in the projection of points, and lines.	Understand (Level 2)
CO3	Demonstrate projection of planes, solids, and development of surfaces using standard engineering drawing principles.	Understand (Level 2)
CO4	Apply the principles of orthographic and isometric projection to create and interpret engineering drawings for accurate visualization and representation of three- dimensional objects.	Apply (Level3)
CO5	Apply BIS standards, type of lines, dimensioning techniques, and drafting tools to draw the projections of points, lines, planes, solids, and develop the surfaces using standard drawing conventions.	Apply (Level3)
CO6	Analyze the multi-views to identify hidden and visible features and spatial relationship.	Analyze (Level4)

CA-1 (a)	Subjective Test/Course Project/Assignment
CA-2 (b)	Subjective Test/Course Project/Assignment
MSE (c)	Subjective Test
ESE (d)	End Semester Exam
Practical (e)	Oral Exam

Course Contents

Unit 1	Introduction to Engineering Drawing & Geometrical Construction Importance of Engineering Graphics, Scope and Applications, Basic Geometrical Construction: Line Bisection; Angle Bisector; Dividing a Line into an Equal Number of Parts. Drawing Standards: IS/BIS and SP-46, Drawing Instruments, Sheet Layout, Lettering, Types of Lines, Aligned and Unidirectional Method of Dimensioning, Drawing of a Polygon: General Method; Arc Method; Inscribed Circle Method; Pentagon by the Special Methods; Diagonal Method; and Inscribed Circle Method.	6Hrs
Unit 2	Projection of Points & Orthographic Projection Principle of Projection, Quadrant System, Reference Planes, and Reference Line. Point situated in different quadrants, Methods of Projection: Orthographic; Isometric; Oblique; and Perspective Projection, Symbols of First angle and Third angle, Difference between First angle and Third angle Method of Projection.	6Hrs
Unit 3	Projection of Straight Lines Various Positions of Straight Line with Respect to Reference Planes, Line Inclined to One Plane and Inclined to Both the Reference Planes (First Quadrant Only), Traces of Lines.	6Hrs
Unit 4	Projection of Planes Types of Planes: Simple Plane; Composite Plane, Various Positions of Planes with Respect to Reference Planes, Planes Inclined to One Reference Plane; Planes Inclined to Both Reference Planes. (Apparent Angle Concept)	6Hrs
Unit 5	Projection of Solids and Development of Surfaces Types of Solids: Cone, Cylinder, Pyramid, and Prisms, Various Positions of Solids, Projection of Solid with Axis Inclined to One Reference Plane only. Introduction to Development of Surfaces, Method of Development- Parallel Line, Radial Line, Triangulation, and Approximate Method, Development of Cylinder, Cone, Pyramid, and Prism.	6Hrs
Unit 6	Isometric Projection Isometric Projection, Isometric Axis, Isometric Lines, Isometric Planes, Isometric Scale and the Different between Isometric Drawing / View and Isometric Projection.	6Hrs

Course Title: Electronics & Electrical Fundamentals		
Code: CK262107		Course Category: ESC
Teaching Scheme	Examination Scheme	
Lectures: 03 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 03	MSE	20 Marks
Semester: First Year(Semester II)	ESE	60 Marks
Course Prerequisite: Basic Laws and Theorems in Physics. Basics of Electricity & Magnetism. Basic concepts of current, voltage, resistance, power etc. Basic knowledge of Algebra & Trigonometry		
Course Description: The Basics of Electrical and Electronics Engineering are foundational to understanding modern technology. The course focuses on Study of current, voltage, power, and energy in circuits. Understanding concepts like Ohm's Law, Kirchhoff's laws, series and parallel circuits, etc. Understanding of how materials like silicon and germanium can be used to control the flow of current & Semiconductors devices are central to electronics. Focuses on systems that use discrete signals, such as logic gates, binary arithmetic. Study the importance of Transducers and instruments in various industries, enabling the measurement, control, and monitoring of physical systems.		
Course Objectives: 1. To recall the fundamental concepts related to DC and AC circuits, electrical machines, diodes, digital electronics , transducers and measuring instruments. 2. To explain the principles, operations, and characteristics of electrical and electronic components, circuits, machines, and instruments. 3. To Utilize electrical and electronic principles for working out circuit problems and to simplify digital circuits. 4. To examine electrical circuits & digital circuits using appropriate laws and theorems.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall the fundamental concepts related to DC and AC circuits, electrical machines, diodes, digital electronics, transducers and measuring instruments.	Remember (Level1)
CO2	Explain the principles, operations, and characteristics of electrical and electronic components, circuits, machines, and instruments.	Understand (Level2)
CO3	Apply electrical and electronic principles to solve basic DC and AC circuit problems, transformer-related calculations, and digital logic problems.	Apply (Level3)
CO4	Measure and verify the performance and characteristics of electrical and electronic circuits, components, and devices using appropriate laboratory instruments and experimental techniques.	Apply (Level3)
CO5	Analyze electrical and electronic circuits using appropriate laws, theorems, device characteristics, waveforms, and Boolean algebra.	Analyze (Level4)
CO6	Analyze and interpret experimental observations and measured results of electrical and electronic circuits and compare them with theoretical values.	Analyze (Level4)

Course Title: Computer Fundamentals		
Course Code:ET262201		Course Category: PCC
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 02	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: - Basic knowledge of high school mathematics and general science. - Familiarity with basic electronic components is helpful but not mandatory.		
Course Description: This course provides a foundational understanding of computers and their applications, specifically tailored for Electronics and Telecommunication (E&TC) engineering students. It introduces students to the essential components of a computer system, including both hardware and software aspects. The course also explores data communication concepts, computer networks, and offers an introductory exposure to programming using Python. Through this course, students will gain the necessary digital literacy skills and computational thinking required in modern engineering practices.		
Course Objectives: - To familiarize students with various types of computer hardware components and their functions. - To provide a clear understanding of software types and the role of operating systems in managing computer resources. - To explain the fundamentals of data communication, including communication models, transmission media, and key concepts like modulation and multiplexing. - To impart knowledge of computer networks, their types, devices, and Internet technologies. - To initiate students into the world of programming using Python, focusing on the basics of coding, logic development, and problem-solving techniques..		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall basic concepts of computers, i/o devices, communication, networking, and basic programming.	Remember (Level1)
CO2	Explain the structure, components and functioning of computer systems, networks and programming logic.	Understand (Level 2)
CO3	Use basic programming constructs and system knowledge to perform simple computing and networking tasks.	Apply (Level 3)
CO4	Analyze computer system components, data communication techniques, network models, and program logic to evaluate system behavior and performance.	Analyze (Level 4)

Course Title: Indian Knowledge System		
Course Code: GE262702		Course Category: HSSM IKS
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 02	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: None		
Course Description: This course provides a comprehensive overview of the Indian Knowledge System (IKS) by exploring the scientific and technological contributions of ancient and modern India across various domains. It covers the foundations of IKS with a focus on mathematics, astronomy, architecture, metallurgy, textiles, and agriculture. The course aims to foster awareness of India's intellectual heritage and its relevance to contemporary science and engineering. It encourages learners to critically appreciate the interdisciplinary nature and global impact of traditional Indian knowledge.		
Course Objectives: 1. To understand the foundational concepts and necessity of the Indian Knowledge System. 2. To identify key historical contributions of Indian scholars in mathematics, astronomy, architecture, metallurgy, textiles, and agriculture. 3. To interpret the scientific principles and techniques underlying traditional Indian practices. 4. To analyse the relevance of IKS in modern scientific and technological contexts. 5. To appreciate the global influence and sustainability of Indian innovation throughout history.		

Course Outcomes:		
COs	After completion of the course, students will be able to	Bloom's Level
CO1	Recall key concepts, terminologies, historical developments, and contributions in Indian Mathematics, Astronomy, Architecture, Metallurgy, Textiles, and Agriculture.	Remember (Level 1)
CO2	Explain the principles, methods, and scientific basis of Indian Knowledge Systems in various domains such as mathematics, astronomy, architecture, metallurgy, textiles, and agriculture.	Understand (Level 2)
CO3	Use traditional Indian scientific and technological methods to address contemporary or theoretical problems in relevant fields.	Apply (Level3)
CO4	Examine the relevance, strengths, and limitations of Indian Knowledge Systems in addressing contemporary scientific, environmental, technological, and societal challenges.	Analyze (Level4)

Course Title: Applied Science II Lab		
Course Code:CK262006		Course Category: BSC
Teaching Scheme	Examination Scheme	
Lectures: 02Hours/Week	CA-1	15 Marks
Credits: 01	CA-1	15 Marks
Semester: First Year (Semester II)	ESE	20 Marks
Course Prerequisite: • Titration method. • Concept of normality, molarity and morality. • Theory of acid and bases.		
Course Description: An Engineering Chemistry Lab course provides students with practical experience in applying chemical principles to engineering problems. It aims to build a solid foundation in chemistry laboratory techniques and analytical methods, enabling students to conduct experiments, analyze data, and draw conclusions relevant to various engineering fields. The main objective of Engineering Chemistry Laboratory is to furnish the conceptual understanding of the basic principles involved in chemical analysis. Most of the experiments are correlated to theoretical concepts. This course lays the foundation of certain basic concepts and skills that can be repeatedly employed by the students in their future endeavours. This course also helps to improve the scientific temper of the students to conduct the various experiments.		
Course Objectives: 1. To help students to understand the chemical principles behind various engineering materials, processes, and systems. 2. To develop experimental skills and to acquire insight into societal and environmental issues. 3. To know the students to procure conceptual clarity of engineering chemistry through laboratory Experiments.		

Course Outcomes: Course outcomes of laboratory are mentioned in theory course outcome.

Assessment	
CA-I (a)	Based on practical: Sr. No. 1 to 4
CA-II (b)	Based on practical: Sr. No. 5 to 8

Sr. No.	List of Experiments	Hours
1.	Determination of hardness of water by EDTA method.	2 Hours
2.	Determination of chloride content in water sample by Mohr's method.	2 Hours
3.	Preparation of Urea –formaldehyde resin.	2 Hours
4.	To study the factors influencing the rate of corrosion	2 Hours

MASTER COPY

Course Title: Electronics & Electrical Fundamentals Lab		
Course Code: CK262108		Course Category: ESC
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester II)	ESE	20 Marks
Course Prerequisite: • Basic knowledge of electrical quantities, circuit elements, and electronic components. • Understanding of voltage, current, resistance, power, and semiconductor devices..		
Course Description: The Basic Electrical & Electronics Engineering Laboratory provides practical exposure to fundamental electrical measurement techniques, electrical Basic Laws, transformers, resonance circuits, and basic electronic devices. The laboratory enables students to test electrical equipment, verify network theorems, analyse resonance circuits, and understand the characteristics of semiconductor devices. Through experimentation, students gain practical knowledge of electrical and electronic systems used in engineering applications.		
Course Objectives: 1. To familiarise students with the verification of fundamental Laws (KVL&KCL) 2. To develop practical skills in testing, measurement, and troubleshooting of electrical circuits. 3. To study the operation and characteristics of electrical lighting systems and semiconductor devices. 4. To verify fundamental electrical network theorems through experimentation. 5. To understand the performance of resonance circuits and transformers. 6. To develop competency in handling laboratory instruments and electrical equipment safely.		

Course Outcomes (COs) :Course Outcomes and the corresponding CO-PO mapping for this laboratory course are aligned with and detailed in the respective Theory Course Syllabus

Assessment	
CA-I (a)	Based on Actual conduction of First 6 Experiments.
CA-II (b)	Based on Actual conduction of next 6 Experiments.
ESE (c)	Practical examination and oral.

MASTER COPY

Chairman, BoS

Sr.No.	List of Experiments	Hours
1.	Measurement and testing of various electronic components using a multimeter.	2 Hours
2.	Verification of KCL Theorem..	2 Hours
3.	Verification of KVL Theorem.	2 Hours
4.	To calculate an efficiency of a transformer.	2 Hours
5.	To calculate the Regulation of a transformer.	2 Hours
6.	To perform a load test on the transformer.	2 Hours
7.	Plot the forward and reverse V-I Characteristics of a PN junction Diode.	2 Hours
8.	To verify input and output waveforms of a Full-wave CT rectifier & Bridge Rectifier.	2 Hours
9.	To verify input and output waveforms of Filters	2 Hours
10.	Study Zener Diode as a Voltage Regulator.	2 Hours
11.	Design and develop a regulated DC power supply using IC 78xx & 79xx	2 Hours
12.	Study of Digital Multimeter, DSO & Function Generator.	2 Hours

Course Title: Professional Development II Course Code:GE262602 Course Category: SC-SEC		
Teaching Scheme	Examination Scheme	
Lectures: 02Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: FirstYear(SemesterII)	ESE	20 Marks
Course Prerequisite: • Completion of familiarity with Professional Development I. • Basic proficiency in English and willingness to develop professional skills further.		
Course Description: This course advances students' professional competencies by focusing on leadership, teamwork, time and goal management, and advanced communication techniques. The practical activities foster self-awareness, effective collaboration, critical thinking, and written communication skills essential for academic and career success.		
Course Objectives: 1. To help students recall essential terms, concepts, and components of leadership, time management, teamwork, and professional communication. 2. To help students understand key concepts of personal effectiveness, leadership and communication in professional settings. 3. To enable students to apply practical skills in teamwork, time management, goal setting, and professional communication. 4. To encourage students to create structured and effective oral and written communication tailored to professional needs.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Recall key terminology, concepts, and components related to leadership, time management, teamwork, and professional communication.	Remember(Level1)
CO2	Explain fundamental principles of leadership, time management, teamwork, and effective communication.	Understand(Level 2)
CO3	Apply essential professional skills such as role playing, presentation, email writing, and rapid reading in real-life scenarios	Apply (Level3)
CO4	Create structured written and spoken communication outputs such as essays, emails, and presentations for professional contexts.	Create (Level6)

Course Title: PBL: Design Thinking Lab		
Course Code:GE262803		Course Category: ELC
Teaching Scheme	Examination Scheme	
Lectures: 02Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: FirstYear(SemesterII)	ESE	20 Marks
Course Prerequisite: None. An open mind and willingness to work in diverse teams is essential.		
Course Description: The course introduces students of engineering to the practices and principles of the Design Thinking tool as a powerful method for addressing issues related to society. The pedagogy used for the course content delivery is through various hands-on activities, real-time case studies, and collaborative projects. With this pedagogy, students will learn to apply the steps of design thinking i.e. Empathy, Problem Defining, Ideation, Prototyping and Testing in a systematic manner. The framework, of course, emphasizes the students to use a stakeholder-centred approach to identify the pressing issues the community faces. The course is merged with the Engineering Design Process, with the various tools and techniques students will use to generate impactful solutions. The course is inclined to culminate in team-based projects align with United Nations Sustainable Development Goals (SDGs).		
Course Objectives: 1. Introduce students of engineering to the concept and process of the Design Thinking approach. 2. Introduce the students to the United Nations Sustainable Development Goals (SDGs). 3. Encourage the students to identify real-world social challenges. 4. Culminate the empathy-driven skills among the students for identifying the critical issues and solving the real-world social problems. 5. To foster creativity, problem-solving skills, and teamwork.		

Course Outcomes:		
COs	After completion of the course student will be able to	Bloom's Level
CO1	Describe the steps of the design thinking approach to solve problems	Remember (Level 1)
CO2	Identify real-world social- based problems (SDGs alignment) and use an empathetic approach (Tools/Techniques) to generate user-centred insights.	Understand (Level 2)
CO3	Formulate a clear problem statement (SMART) from the client/ user/ designer point of view.	Apply (Level 3)
CO4	Generate, evaluate, and select multiple innovative feasible ideas with structured brainstorming techniques through teamwork.	Analyze (Level 4)
CO5	Develop a low-cost, low-to-medium fidelity prototype (Physical/Digital) to Communicate the ideas and test through the potential user feedback	Create (Level 6)

CO1	1	2	-	1	-	2	1	-	-	-	-	-	-
CO2	1	2	1	1	-	1	-	-	-	-	-	-	-
CO3	-	1	2	-	-	-	-	-	1	-	-	-	-
CO4	-	1	2	2	1	-	-	-	1	1	-	-	-
CO5	2	2	1	-	3	1	-	-	2	3	1	-	-

Assessment

CA-1 (a)	- Identify the problems faced by the society /community (SDGAlign). - Empathise with the design thinking approach. - Synthesise with an empathy map. Identify the constraints and enlist the objectives from a designer's point of view. - Take the decision to prioritise the objectives with the multi-criteria decision matrix. - Define the problem statement with the SMART technique.
CA-2 (b)	- Ideate the solution for the defined problem/challenge. - Use the principle of decomposition and generate multiple ideas with Brain writing Techniques. - Select and filter the ideas. - Use Feasibility-Impact and Morphological chart for the evaluation of generated solutions. - Develop and test the Prototype (Digital/Poster).

Sr.No.	List of Activities	Hours
1.	To explore the process of Design Thinking through case studies aligned with Sustainable Development Goals (SDG's).	2 Hours
2.	To understand the various problem-framing techniques for social challenges.	2 Hours
3.	To conduct the empathy research and synthesise it with an empathy map.	2 Hours
4.	To formulate the Point of View (PoV) statement for the design challenge through empathy map and multi-criteria decision-making techniques.	2 Hours
5.	To apply the divergent & convergent thinking techniques for generation and evaluation of ideas.	2 Hours
6.	To build low-to-medium fidelity prototypes to represent the ideas.	2 Hours
7.	To test and iterate the designed prototype using the structured test plans..	2 Hours

Course Title: NSS		
Course Code:GE262901		Course Category: LLC
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-I	25 Marks
Credits: 01	CA-II	25 Marks
Semester: FirstYear (Semester II)	ESE	--
Course Prerequisite: • Basic Awareness of Social Issues. • Interest in Community Service. • Willingness to Engage in Extracurricular Activities. • Basic Communication Skills..		
Course Description: The National Service Scheme (NSS) is a flagship program of the Government of India, designed to promote voluntary community service among students. The program aims to foster a sense of social responsibility, leadership, and civic engagement among youth, particularly within educational institutions. NSS provides students with opportunities to participate in meaningful activities that address real-world community challenges, helping them develop both personally and professionally.		
Course Objectives: 1. Promote Social Responsibility and Civic Engagement. 2. Develop Leadership Skills. 3. Enhance Awareness of Social Issues. 4. Foster Youth Empowerment. 5. Engage in Community Development Activities. 6. Build a Spirit of National Integration.		

Course Outcomes:		
COs	After completion of the course, students will be able to	Bloom's Level
CO1	Recall the aims, objectives, and core values of the National Service Scheme in relation to various activities in NSS.	Remember (Level1)
CO2	Identify the role of youth in community development and their responsibilities in promoting social welfare.	Understand (Level2)

Assessment	
CA-I(a)	Based on Activities 01 to 06
CA-II(b)	Based on Activities 07 to 12

Sr.No.	List of Activities	Hours
1.	Introduction, Aims and Objectives of NSS: Report writing on understanding the social impact of NSS.	2 Hours
2.	Youth & Community: Debate on the role of youth in society and their Responsibility toward community development..	2 Hours
3.	Importance and Role of Youth Leadership: Presenting the role model and the leadership qualities of the role model which influence them	2 Hours
4.	Importance and Role of Youth Leadership: Group activity to understand the importance of leadership and how to apply it in real-life scenarios.	2 Hours
5.	Health, Hygiene and Diseases: Case study on hygiene in rural India.	2 Hours
6.	Needs and Meaning of Socio-Economic Survey: Poster making on water Conservation awareness	2 Hours
7.	Needs and Meaning of Socio-Economic Survey: Survey on road safety awareness.	2 Hours
8.	Needs and Meaning of Socio-Economic Survey: Presentation on Swachh Bharat Abhiyan.	2 Hours
9.	Environment and Energy Conservation Concepts: Survey based on Environmental awareness.	2 Hours
10.	Environment and Energy Conservation Concepts: Essay competition on Renewable Energy.	2 Hours
11.	Disaster Management: Survey preparedness to face any disaster.	2 Hours
12.	National Integration: Stage an activity of a student group on fostering awareness of unity in diversity..	2 Hours
