Multidisciplinary Minor (MDM)	Multidisciplinary Courses	--	--	02	03	03	03	03	--	14
• (B.E./ B.Tech. or Equivalent) in Engg. / Tech. with Multidisciplinary Minor • Major + MDM = 162+14 = 176 Credits										176
Honors and Multidisciplinary Minor		--	--	3	3	4	4	4	--	18
• 4-Years Bachelor's degree (B.E./ B.Tech. or Equivalent) in Engg. / Tech.- Honors and Multidisciplinary Minor • Major + Honors + MDM = 162+18+14 = 194 Credits • Students with a minimum CGPA of 7.5 without backlog courses at the end of Second semester and should have earned 42 credits are eligible for admission to the UG Bachelor's Degree with Honors.										194
Honors with Research and Multidisciplinary Minor		--	--	--	--	--	--	08	10	18
• 4-Years Bachelor's degree (B.E./ B.Tech. or Equivalent) in Engg. / Tech.- Honors with Research and Multidisciplinary Minor • Major + Research MDM = 162+18+14 = 194 Credits • Students with a minimum CGPA of 7.5 without backlog courses at the end of Sixth semester and should have earned 124 credits are eligible for admission to the UG Bachelor's Degree with Research.										194
Double Minors (Multidisciplinary and Specialization Minors)		--	--	3	3	4	4	4	--	18
• 4-Years Bachelor's degree (B.E./ B.Tech. or Equivalent) in Engg. / Tech.- Major Engg. Discipline with Double Minors (Multidisciplinary and Specialization Minors) • Major + MDM + Specialized Minor = 162+14+18 = 194 Credits • Students with a minimum CGPA of 7.5 without backlog courses at the end of Second semester and should have earned 42 credits are eligible for admission to the UG Bachelor's Degree with Double Minor.										194

Note:

1. Multiple entry & exit criteria will be in accordance with the AICTE/UGC/DTE/NEP-2020 guidelines.
2. For Audit Course (AU), participation is mandatory but not included in Grade calculation.
3. The Honors and Specialization Minor (Double Minor) offered by the program is exclusively for students of that program. Only students with a minimum CGPA of 7.5 and no backlogs at the end of the Second Semester are eligible. Students must maintain a minimum CGPA of 7.5 and remain without backlogs throughout the program. To earn the Honors and Specialization Minor (Double Minor), student must complete all the courses offered by the program.
4. Honors and Specialization Minor (Double Minor) courses shall be offered through the SWAYAM/NPTEL online learning platform. The Board of Studies (BoS) shall identify, approve, and recommend the course based on its relevance to the program curriculum, academic quality, and prevailing industry standards.

Course Title: Linear Algebra and Calculus Course Code: NT261001		Course Category: BSC	
Teaching Scheme		Examination Scheme	
Lectures:03hrs/week		CA-1	10 Marks
Tutorial:01hrs/week		CA-2	10 Marks
Credits:04		MSE	20 Marks
Semester: First Year (Semester I)		ESE	60 Marks
Course Prerequisite: - Basic Algebra & Trigonometry–Equations, identities, functions. - Basics of Calculus–Derivatives and simple integration. - Basics of Matrix–Matrix types, operations and solving simple linear systems.			
Course Description: This course covers essential topics in engineering mathematics, including matrices, eigen values, partial differentiation and multiple integrals. It focuses on solving linear systems, optimization and applying calculus to real-world problems like area and volume calculation. These mathematical tools form the backbone of many engineering fields and help to develop logical problem-solving skills.			
Course Objectives: - To develop a strong foundation in matrix algebra and its applications in solving systems of equations and introduce the concepts of eigen values and eigen vectors and their role in engineering problems. - To understand partial differentiation and apply it to functions of several variables. - To apply multiple integrals in calculating areas, volumes and other engineering-related quantities.			

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall the basic concepts related to matrices and calculus.	Remember (Level 1)
CO2	Compute solutions using the fundamental concepts of linear algebra and multivariable calculus.	Understand (Level 2)
CO3	Solve mathematical problems based on the concepts related to matrices and multivariable calculus.	Apply (Level3)
CO4	Analyze mathematical problems by identifying and applying appropriate concepts from matrices, partial derivatives, and multiple integrals.	Analyze (Level 4)

Civil Engineering

Course Contents		
Unit 1	Linear Algebra-Matrices-I Introduction; Definition and types of matrices; Matrix Operations; Rank of a matrix; Canonical form of a matrix; Normal form of a matrix; Consistency of non-homogeneous and homogeneous system of linear equations.	6 Hrs.
Unit 2	Linear Algebra-Matrices-II Introduction; Linear dependence and independence of vectors; Eigen values and Eigen vectors; Properties of eigen values and eigen vectors (without proofs); Cayley Hamilton's theorem (without proof) and its applications; Quadratic Forms.	6 Hrs.
Unit 3	Partial Differentiation Introduction; Partial derivatives of first and higher orders; Homogeneous functions – Euler's Theorem for functions containing two and three variables (with proofs); Total derivatives; Change of variables.	6 Hrs.
Unit 4	Applications of Partial differentiation Introduction; Jacobians-properties; Taylor's and Maclaurin's theorems (without proofs) for functions of two variables; Maxima and minima of functions of two variables; Lagrange's method of undetermined multipliers.	6 Hrs.
Unit 5	Multiple Integrals Introduction; Reduction formulae for $\int_0^a \int_0^x \sin x \cdot y \, dy \, dx$, $\int_0^a \int_0^x \cos x \cdot y \, dy \, dx$, $\int_0^a \int_0^x \sin x \cdot \cos x \cdot y \, dy \, dx$; Evaluation of Double Integrals in Cartesian and polar co-ordinates with and without limit, evaluation of integral by changing to polar; Triple integral in Cartesian and polar.	6 Hrs.
Unit 6	Applications of Multiple Integrals Introduction; Applications of multiple integrals to find area as double integral in cartesian and polar, Surface area; volume as triple integral.	6 Hrs.

Course Title: Applied Science II		Course Category: BSC	
Course Code: NT261002			
Teaching Scheme	Examination Scheme		
Lectures: 03 Hours/ week	CA-1	10 Marks	
Tutorial: -----	CA-2	10 Marks	
Credits: 03	MSE	20 Marks	
Semester: First Year (Semester I)	ESE	60 Marks	
Course Prerequisite: Chemistry course at secondary and higher secondary level.			
Course Description: Chemistry is the backbone of all Engineering disciplines. Chemistry is not just important in Engineering, it's essential. Chemistry is an imperative part of every degree program in Engineering & Technology. This course is generally incorporated in the first-year syllabus of Bachelor of Technology degree in Engineering, and it is structured in a manner that its different theoretical concepts are studied along with their practical applications. This course cover topics like Water technology, Fuels and Electrochemical energy sources, High polymers, Corrosion and its control, Lubricants and Environmental chemistry along with practical laboratory experiments. The goal is to help students to understand the chemical principles behind various engineering materials, processes, and systems.			
Course Objectives:			
1. To understand the technology involved in analysis and improving quality of water.			
2. To Study the various energy sources and alternative fuels with respect to their characteristics and applications.			
3. To understand the properties and applications of various engineering materials, such as polymers.			
4. To Understand Corrosion mechanisms and methods of prevention for corrosion control.			
5. To study the mechanism, classification and properties of lubricants.			
6. To examine the chemical aspects of environmental issues, such as air and water pollution, and pollution control.			

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall the basic concepts of water treatment, fuels, electrochemical energy sources, polymers, corrosion, lubricants, and pollution control.	Remember (Level 1)
CO2	Describe the principles and processes involved in water softening, coal analysis, polymer preparation, corrosion mechanisms, lubricants, and pollution control.	Understand (Level 2)
CO3	Interpret the concepts and processes involved in water treatment, fuels and electrochemical energy sources, high polymers, corrosion, lubricants, and environmental chemistry.	Understand (Level 2)
CO4	Calculate the total hardness of water based on the compounds responsible for water hardness.	Apply (Level 3)
CO5	Apply fundamental principles of chemistry to perform experiments related to volumetric analysis, physical property measurements, corrosion, and polymers for skill development.	Apply (Level 3)
CO6	Examine experimental data and interpret the results to draw appropriate conclusions related to engineering chemistry concepts.	Analyze (Level 4)

MSE (c)	Subjective Test
ESE (d)	End Semester Examination
Practical (e)	Practical Performance and viva examination

Course Contents		
Unit 1	Water Technology Introduction, Hardness, types of Hardness, Disadvantages of hard water for domestic and industrial use, Numerical based on hardness, determination of hardness of water by EDTA method, Water softening methods: Zeolite method and Ion Exchange method.	6 Hrs.
Unit 2	Fuels and Electrochemical Energy Sources Introduction, Classification of fuels, Calorific value, higher calorific value (HCV) & Lower calorific value (LCV), Characteristics of good fuels, Analysis of Coal: Proximate analysis, Refining of crude oil, Introduction to Biomass and hydrogen fuel. Rechargeable batteries: Lithium-ion battery, Fuel Cell: H ₂ -O ₂ Fuel cell.	6 Hrs.
Unit 3	High Polymers Introduction, Polymerization and its types, thermo softening and thermosetting plastics, preparation, properties, and uses of: Polymethyl methacrylate (PMMA), Urea formaldehyde resin, Styrene –butadiene rubber, conducting polymers its types and applications, Introduction to polymer materials for 3-D printing.	6 Hrs.
Unit 4	Corrosion and its Control Introduction, types of corrosion- Chemical and Electrochemical corrosion, mechanism of electrochemical corrosion, factors influencing rate of corrosion, Prevention of corrosion by galvanizing, tinning and cathodic protection method.	6 Hrs.
Unit 5	Lubricants Introduction, Classification of lubricants, Mechanism of lubrication, properties of lubricants- Viscosity and viscosity index, surface tension, flash point and fire point, cloud point and pour point, acid value and saponification number.	6 Hrs.
Unit 6	Environmental Chemistry Introduction, Air pollution: Types of air pollutants, Control of air pollution, Water pollution: sources of water pollution and its control, determination of dissolved oxygen in water by Iodometric/Winkler's method.	6 Hrs.

Course Title: Engineering Graphics Course Code: GE261101			Course Category: ESC
Teaching Scheme		Examination Scheme	
Lectures: 03 hrs./ week		CA-1	10 Marks
Tutorial: --		CA-2	10 Marks
Credits: 03		MSE	20 Marks
Semester: First Year (Semester I)		ESE	60 Marks
Course Prerequisite: - Knowledge of Geometry (Linear and angular), Coordinate Geometry. - Basic Mathematics.			
Course Description: Engineering Graphics is a basic course for all undergraduate engineering programs. This course is introduced to provide basic understanding of the fundamentals of Engineering Drawing, mainly visualization, graphic theory, standards and conventions of drawing, the tools of drawing and use of drawing in engineering applications. A picture speaks thousands of words. A message conveyed by a picture is much more effective than a message conveyed by words. The human being used the language of drawing to convey their ideas, thoughts, feelings, emotions since before the start of civilization. With development in science and technology humans felt the need for standardized drawing that it could be understood universally. This standardized technical language was then termed as Engineering Drawing.			
Course Objectives: - To know and understand the concepts of Projection Development of Surfaces. - To construct 2D and 3D views of objects. - To communicate effectively in Engineering Environment			

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Familiarize the geometrical fundamental concepts, BIS standard, drafting tools and theory of projection for construction of different geometries and engineering objects.	Remember (Level 1)
CO2	Interpret the importance of reference planes while drawing the front view and top view in the projection of points, and lines.	Understand (Level 2)
CO3	Demonstrate projection of planes, solids, and development of surfaces using standard engineering drawing principles.	Understand (Level 2)
CO4	Apply the principles of orthographic and isometric projection to create and interpret engineering drawings for accurate visualization and representation of three-dimensional objects.	Apply (Level 3)
CO5	Apply BIS standards, type of lines, dimensioning techniques, and drafting tools to draw the projections of points, lines, planes, solids, and develop the surfaces using standard drawing conventions.	Apply (Level 3)
CO6	Analyze the multi-views to identify hidden and visible features and spatial relationship.	Analyze (Level 4)

Lectures: 03 hrs/ week		CA-1	10 Marks
Tutorial: -----		CA-2	10 Marks
Credits: 03		MSE	20 Marks
Semester: First Year (Semester I)		ESE	60 Marks
Course Prerequisite: • Basic Laws and Theorems in Physics. • Basics of Electricity & Magnetism. • Basic concepts of current, voltage, resistance, power etc. • Basic knowledge of Algebra & Trigonometry			
Course Description: The Basics of Electrical and Electronics Engineering are foundational to understanding modern technology. The course focuses on Study of current, voltage, power, and energy in circuits. Understanding concepts like Ohm's Law, Kirchhoff's laws, series and parallel circuits, etc. Understanding of how materials like silicon and germanium can be used to control the flow of current & Semiconductor's devices are central to electronics. Focuses on systems that use discrete signals, such as logic gates, binary arithmetic. Study the importance of Transducers and instruments in various industries, enabling the measurement, control, and monitoring of physical systems.			
Course Objectives: 1. To recall the fundamental concepts related to DC and AC circuits, electrical machines, diodes, digital electronics, transducers and measuring instruments. 2. To explain the principles, operations, and characteristics of electrical and electronic components, circuits, machines, and instruments. 3. To utilize electrical and electronic principles for working out circuit problems and to simplify digital circuits. 4. To examine electrical circuits & digital circuits using appropriate laws and theorems.			

Course Outcomes:

ESE(d)	End-Semester Exam

Course Contents		
Unit 1	Elementary Concept & DC Circuits Circuit Components: Active and Passive Components, Basic Concepts: EMF, Current, Ohm 's Law, Ideal & practical voltage & Current sources & Relation between Voltage, Current & Power. DC Circuits: Kirchhoff's Laws (KCL & KVL), Superposition & Thevenin's Theorem	6Hrs
Unit 2	AC Fundamentals & Transformer AC Signal Parameters: Waveforms, Average value, RMS Value, Instantaneous value, active power, reactive power and apparent power, power factor. Pure R, L, C. circuit, AC series Circuits: R-L, R- C & R- L-C (Simple problems only). Single Phase Transformer: Faraday's Law of EMI, Len'z Law, Self and Mutual Induction Construction and working, EMF Equation, Losses, Efficiency, Regulation	6Hrs
Unit 3	Electrical Machines DC Motors: Construction & Working principle, Types: DC Series & Shunt Motor, Characteristics of DC Motor and Applications. AC Motor: Construction & Working principle of Single-Phase Induction Motor, Types: Capacitor Start I.M., Capacitor Start Capacitor Run I.M. and Applications, Construction & Working principle of Three-Phase Induction Motor and its types. Special Purpose Motors: Stepper Motor, Servo Motor and BLDC & Introduction to Synchronous motor.	6Hrs
Unit 4	Diodes and its Applications Basics of Semiconductor: Types of Semiconductors-intrinsic & Extrinsic PN Junction diode: Formation of PN Junction, Biasing of PN Junction diode, V-I characteristics, Principle of avalanche breakdown. Rectifier: Need of Rectifiers, Half Wave, Full Wave Center Tapped & Full Wave Bridge Rectifier. Filters & Voltage Regulation: Capacitor Filter, LC Filter and CLC/n-Filter. Zener Diode as Voltage Regulator, Linear IC Voltage Regulators- 78XX & 79XX, Block diagram of a regulated dc power supply.	6Hrs
Unit 5	Basics of Digital Electronics Number Systems: Types of Number systems: Binary, Octal, Decimal & Hexadecimal and their conversions, 1's and 2's Complements, Binary Arithmetic (Addition, Subtraction Multiplication & Division). Basic Logic Gates: AND, OR & NOT Universal Gates: NAND & NOR Derived Gates: XOR & XNOR & Boolean Algebra	6Hrs

MASTER COPY

Course Title: Modern Indian Language: English		
Course Code: GE261705		Course Category: HSSM-AEC
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 02	MSE	20 Marks
Semester: First Year (Semester I)	ESE	60 Marks
Course Prerequisite: - Basic knowledge of English grammar and vocabulary. - Ability to read and comprehend simple English texts. - Willingness to actively participate in listening, speaking, reading, and writing activities.		
Course Description: This course aims to develop foundational communication skills in English, essential for academic, professional, and personal contexts. It introduces students to the core concepts of communication, including verbal, non-verbal, and written forms.		
Course Objectives: - To recall key concepts of English grammar, phonetics, vocabulary, and basic language structures - To understand the use of language in various contexts—academic, professional, and everyday communication - To apply correct grammar, pronunciation, and vocabulary in spoken and written English - To create well-structured and purpose-driven written texts such as reports, letters, and emails		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall and recognize grammatical forms, sentence structures, phonetic symbols, and vocabulary items	Remember (Level 1)
CO2	Interpret and explain the function of language in comprehension, speech, and writing	Understand (Level 2)
CO3	Apply language skills—grammar, phonetics, and vocabulary in oral communication and writing tasks	Apply (Level 3)
CO4	Compose clear, grammatically accurate, and well-formatted texts for academic and professional purposes	Analyze (Level 4)

Course Contents		
Unit 1	Communication and Communication Processes Introduction to Communication, Process & elements involved in Communication, Forms and functions of Communication, Barriers to Communication and overcoming them.	4 hrs.
Unit 2	Listening Skill & Reading Skill Listening Skills: Importance of Listening, Types of Listening, Barriers to Listening. Reading Skills: Introduction to Reading, Types of Readers and Reading, Barriers to Reading, Strategies for Reading, Comprehension.	3 hrs.
Unit 3	Verbal & Non-verbal Communication Use of Language in Spoken Communication, Appropriate Use of Non-verbal Communication, Principles and Practice of Group Discussion, Public Speaking, Interview Techniques, Presentation Skills.	5 hrs.
Unit 4	Study of Sounds in English Introduction to phonetics, Study of Speech Organs, Study of Phonemic Script, Articulation of Different Sounds in English.	4 hrs.
Unit 5	English Grammar Grammar: Forms of Tenses, Articles, Prepositions, Use of Auxiliaries and Modal Auxiliaries, Synonyms and Antonyms, Common Errors in English language.	4 hrs.
Unit 6	Writing Skills Features of Good Language, Writing Emails, Technical Reports: Report Writing: Format, Structure and Types. Letter Writing: Types & Layouts, Letters and Job Application and Resume.	4 hrs.

Civil Engineering

Course Title: Applied Science II Lab**Course Code: NT261003****Course Category: BSC**

Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	ESE	20 Marks

Course Prerequisite:

- Titration method.
- Concept of normality and morality.
- Theory of acid and bases.

Course Description: An Engineering Chemistry Lab course provides students with practical experience in applying chemical principles to engineering problems. It aims to build a solid foundation in chemistry laboratory techniques and analytical methods, enabling students to conduct experiments, analyze data, and draw conclusions relevant to various engineering fields. The main objective of Engineering Chemistry Laboratory is to furnish the conceptual understanding of the basic principles involved in chemical analysis. Most of the experiments are correlated to theoretical concepts. This course lays the foundation of certain basic concepts and skills that can be repeatedly employed by the students in their future endeavors. This course also helps to improve the scientific temper of the students to conduct the various experiments.

Course Objectives:

1. To help students understand the chemical principles behind various engineering materials, processes, and systems.
2. To develop experimental skills and to acquire insight into societal and environmental issues.
3. To help the students procure conceptual clarity of engineering chemistry through laboratory experiments.

Note: The Course Outcomes (COs) and the corresponding CO-PO mapping for this laboratory course are aligned with and detailed in the respective Theory Course Syllabus.

Assessment	
CA-I (a)	Performance of Evaluation of Experiments/Activities (Sr.No. 1 to 4)
CA-II (b)	Performance of Evaluation of Experiments/Activities (Sr. No. 4 to 8)
ESE (c)	Practical performance and viva examination

Sr. No.	List of Experiments/Activities
1	Determination of the hardness of water by the EDTA method.
2	Preparation of Urea –formaldehyde resin.
3	To study the factors influencing the rate of corrosion.
4	To determine the acid value of a given oil sample.
5	To determine the surface tension of a given liquid by the drops number method.
6	To determine the viscosity of a given liquid by Ostwald's viscometer.
7	To determine the dissolved oxygen in a water sample by Winkler's method.
8	To determine normality and strength of given acid solution conductometrically (Strong Acid vs. strong Base)

Course Title: Engineering Graphics Lab		Course Category: ESC	
Course Code:GE261103			
Teaching Scheme		Examination Scheme	
Practicals/Sessions: 02 Hours/Week		CA-I	15 Marks
Credits: 01		CA-II	15 Marks
Semester: First Year (Semester I)		ESE	20 Marks
Course Prerequisite: - Knowledge of Geometry (Linear and angular), Coordinate Geometry. - Basic Mathematics.			
Course Description: Engineering Graphics is a basic course for all undergraduate engineering programs. This course is introduced to provide a basic understanding of the fundamentals of Engineering Drawing, mainly visualization, graphic theory, standards and conventions of drawing, the tools of drawing, and the use of drawing in engineering applications. A picture speaks a thousand words. A message conveyed by a picture is much more effective than a message conveyed by words. Human beings have used the language of drawing to convey their ideas, thoughts, feelings, and emotions since before the start of civilization. With the development of science and technology, humans felt the need for standardized drawing so that it could be understood universally. This standardized language was then termed as Engineering Drawing.			
Course Objectives: - To Know and Understand the Concepts of Projection of Points, Lines, Planes, Solids, and Development of Surfaces. - To Construct 2D and 3D views of objects. - To communicate effectively in an Engineering Environment			

Note: The Course Outcomes (COs) and the corresponding CO-PO mapping for this laboratory course are aligned with and detailed in the respective Theory Course Syllabus.

Assessment	
CA-I (a)	Based on Practical: Sr. No. 01 to 05
CA-II (b)	Based on Practical: Sr. No. 06 to 10
ESE (c)	Viva exam

Sr. No.	List of Experiments
1	Lettering, Numbering and dimensioning.
2	Geometrical Construction.
3	Projections of Points.
4	Orthographic Projections- (First Angle Method)
5	Orthographic Projections- (Third Angle Method)
6	Projections of Lines.
7	Projections of Planes.
8	Projections of Solids.
9	Development of Surfaces.
10	Isometric Projections.

Course Title: Professional Development I		
Course Code: GE261601		Course Category: SC-SEC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	ESE	20 Marks
Course Prerequisite: - Willingness to participate actively in oral and group communication tasks. - Basic understanding of English language (reading, writing, speaking).		
Course Description: This course is designed to develop essential professional and interpersonal skills in students through interactive and activity-based learning. It emphasizes spoken English, confidence building, and real-world communication situations such as introductions, interviews, debates, and presentations. Through practical exposure to public speaking, storytelling, group discussions, and more, students will enhance their communication abilities and become effective, confident speakers capable of navigating academic and professional environments.		
Course Objectives: - To help students recall essential terminology, formats, and structures used in oral communication. - To familiarize students with the foundational principles of effective oral communication in academic and professional settings. - To provide students with opportunities to practice and apply communication strategies through structured speaking activities. - To develop students' ability to design and deliver creative and context-appropriate oral communication tasks.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall key concepts and techniques involved in basic oral communication tasks.	Remember (Level 1)
CO2	Explain the principles and techniques of effective oral communication in personal, academic, and professional contexts.	Understand (Level 2)
CO3	Apply appropriate speaking strategies in activities such as group discussions, interviews, and presentations.	Apply (Level 3)
CO4	Design and deliver structured oral communication tasks using appropriate style, tone, and language.	Create (Level 6)

Civil Engineering

Course Title: Do It Yourself I		
Course Code: GE261801		Course Category: ELC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	25 Marks
Credits: AU	CA-II	25 Marks
Semester: First Year (Semester I)	ESE	AU
Course Prerequisite: None. An open mind and willingness to work individually and in a diverse team is essential.		
Course Description: This hands-on, introductory laboratory course exposes engineering students to the core ecosystems of modern engineering: Digital Fabrication, Robotics & Automation, Artificial Intelligence, and Internet of Things (IoT). Students transition from passive consumers of technology to active creators by learning to safely navigate real-world laboratory tools, software environments, and physical hardware. Through micro-projects, troubleshooting tasks, and an intensive capstone tinkering challenge, students develop cross-disciplinary engineering design thinking, spatial visualization, and technical collaborative skills vital for succeeding in advanced core engineering streams.		
Course Objectives: 1. Develop hands-on skills in digital fabrication and rapid prototyping using modern MakerSpace technologies. 2. Develop and assemble basic electronic circuits and design simple PCB layouts. 3. Build and program basic robotic and IoT-based systems for real-world applications. 4. Apply fundamental Artificial Intelligence and computer vision techniques to practical problems. 5. Integrate multidisciplinary technologies to develop functional prototypes through a hands-on, problem-solving approach.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Describe and Demonstrate safety practices in a rapid prototyping laboratory to ensure safe working conditions.	Understand (Level 2)
CO2	Develop simple components using CAD, slicing, and digital fabrication techniques for rapid prototyping.	Apply (Level 3)
CO3	Execute spatial digitization, reverse engineering, and subtractive manufacturing operations for product replication.	Apply (Level 3)
CO4	Examine and Perform basic programming, sensor interfacing, robotics, IoT, artificial intelligence, and computer vision applications.	Analyze (Level 4)
CO5	Synthesize multidisciplinary hardware, electronics, and digital technologies to develop functional prototypes within defined constraints.	Create (Level 6)

Course Title: PBL: Design Thinking Lab**Course Code: GE261803****Course Category: ELC**

Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester I)	ESE	20 Marks

Course Prerequisite: None. An open mind and willingness to work in diverse teams is essential.

Course Description: The course introduces the students of engineering to the practices and principles of Design Thinking tool as a powerful method for the issues related to the society. The pedagogy used for the course content delivery is through various hands-on activities, real time case studies and collaborative projects. With this pedagogy students will learn to apply the steps of design thinking i.e. Empathy, Problem Defining, Ideation, Prototyping and Testing in a systematic manner. The framework of course emphasizes the students to use stakeholder-centred approach to identify the pressing issues the community faces. The course is merged with Engineering Design Process, with the various tools and techniques students will generate the impactful solutions. The course is inclined to culminate the team-based projects align with United Nations Sustainable Development Goals (SDGs).

Course Objectives:

1. Introduce students of engineering to the concept and process of Design Thinking approach.
2. Introduce the students to the United Nations Sustainable Development Goals (SDGs).
3. Encourage the students to identify the real-world social challenges.
4. Culminate the empathy-driven skills among the students for identifying the critical issues and solving the real-world social problems.
5. To foster creativity, problem-solving skills and teamwork.

Course Outcomes:

COs	After completion of the course students will be able to	Bloom's Level
CO1	Describe the steps of the design thinking approach to solve the problems.	Remember (Level 1)
CO2	Identify the real-world social-based problems (SDGs align) and use an empathetic approach (Tools/Techniques) to generate user-centered insights.	Understand (Level 2)
CO3	Formulate a clear problem statement (SMART) from the client/user/designer point of view.	Apply (Level 3)
CO4	Generate , evaluate, and select multiple innovative feasible ideas with structured brainstorming techniques through teamwork.	Analyze (Level 4)
CO5	Develop a low-cost, lower to medium fidelity prototype (Physical/Digital) to communicate the ideas and test through the potential user feedback.	Create (Level 6)

Assessment	
CA-I (a)	Identify the problems faced by the society/ community (SDG Align). Empathize with the design thinking approach. Synthesize with empathy map. Identify the constraints and enlist the objectives as a designer point of view. Take the decision to prioritize the objectives with the multi-criteria decision matrix. Define the problem statement with SMART Technique.
CA-II (b)	Ideate the solution for the defined problem/challenge. Use principle of decomposition and generate multiple ideas with Brainwriting Techniques. Select and filter the ideas. Use Feasibility-Impact and Morphological chart for the evaluation of generated solutions. Develop and test the Prototype (Digital/Poster).
ESE (c)	Assigned task Completion

Sr. No.	List of Experiments/Activities	Hours
1.	To explore the process of Design Thinking through case studies aligned with Sustainable Development Goals (SDG's).	2 Hrs
2.	To understand the various problem framing techniques for social challenges.	2 Hrs
3.	To conduct the empathy research and synthesize with empathy map.	4 Hrs
4.	To formulate the Point of View (PoV) statement for the design challenge through empathy map and multi-criteria decision-making techniques.	4 Hrs
5.	To apply the divergent & convergent thinking techniques for generation and evaluation of ideas.	2 Hrs
6.	To build low to medium fidelity prototype to represent the ideas.	4 Hrs
7.	To test and iterate the designed prototype using the structured test plans.	2 Hrs

Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	25 Marks
Credits: 01	CA-II	25 Marks
Semester: First Year (Semester I)	ESE	-
Course Prerequisite: • Basic Awareness of Social Issues. • Interest in Community Service. • Willingness to Engage in Extracurricular Activities. • Basic Communication Skills.		
Course Description: The National Service Scheme (NSS) is a flagship program of the Government of India, designed to promote voluntary community service among students. The program aims to foster a sense of social responsibility, leadership, and civic engagement among youth, particularly within educational institutions. NSS provides students with opportunities to participate in meaningful activities that address real-world community challenges, helping them develop both personally and professionally.		
Course Objectives: 1. Promote Social Responsibility and Civic Engagement. 2. Develop Leadership Skills. 3. Enhance Awareness of Social Issues. 4. Foster Youth Empowerment. 5. Engage in Community Development Activities. 6. Build a Spirit of National Integration.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall the aims, objectives, and core values of the National Service Scheme in relation to various activities in NSS.	Remember (Level 1)
CO2	Identify the role of youth in community development and their responsibilities in promoting social welfare.	Understand (Level 2)

Course Title: Multivariable Calculus		Course Category: BSC	
Course Code: NT262004			
Teaching Scheme		Examination Scheme	
Lectures:03hrs./week		CA-1	10Marks
Tutorial:-----		CA-2	10Marks
Credits: 03		MSE	20Marks
Semester: First Year (Semester II)		ESE	60Marks
Course Prerequisite: - Basic Calculus: Understanding of differentiation and integration, including higher-order derivatives and integrals. - Elementary Differential Equations: A foundational understanding of simple ordinary differential equations (ODEs), including first-order equations and basic solution techniques. - Multivariable Calculus: Familiarity with partial derivatives and multiple integrals, which is essential for vector calculus and partial differential equations.			
Course Description: This course covers the study of differential equations and vector calculus with applications in engineering. It focuses on solving first-order and higher-order ordinary differential equations (ODEs), including exact linear, Bernoulli's equations and applying shortcut methods for linear equations with constant coefficients. The course also introduces partial differential equations (PDEs) and their solution techniques. Students will learn vector calculus concepts such as gradient, divergence, curl and apply vector integral theorems like Green's, Gauss' and Stokes' theorems. The course emphasizes practical applications in mechanical, electrical and civil engineering providing the mathematical tools needed to solve real-world engineering problems.			
Course Objectives: - To solve first-order and higher-order differential equations, including exact, linear and Bernoulli's equations with engineering applications. - To learn methods for solving linear differential equations with constant coefficients using shortcut techniques. - To apply linear differential equations to real-world mechanical and civil engineering problems and solve partial differential equations using techniques like separation of variables. - To understand and apply vector calculus concepts (gradient, divergence, curl) in physical fields. - To use vector integral theorems (Green's, Gauss', and Stokes') for solving engineering and physics problems.			

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall the concepts of vector calculus and techniques for solving the differential equations.	Remember (Level 1)
CO2	Compute the solution of mathematical problems related to differential and vector calculus.	Understand (Level 2)
CO3	Solve the mathematical problems involving differential equations and vector operations.	Apply (Level3)
CO4	Analyze ordinary and partial differential equations and vector calculus concepts to solve engineering problems using appropriate analytical techniques.	Analyze (Level 4)

MSE (c)	Subjective Test
ESE (d)	End Semester Examination

Course Contents		
Unit1	Ordinary Differential Equations of First Order and First Degree and Their Applications Introduction; Exact differential equations; Linear equations; Reducible to linear equations (Bernoulli's equation); Applications to orthogonal trajectories, mechanical engineering and electrical engineering.	6 Hrs.
Unit2	Linear Differential Equations with Constant Coefficients Introduction; complementary function, particular integral; Rules for finding complementary functions and particular integrals (Shortcut Methods–Type I $X \cdot e^{ax} / k/a^x$, Type II $X \cdot \sin ax / \sin(ax \cdot b)$, Type III $X \cdot \sinh ax / \sinh(ax \cdot b)$, Type IV $X \cdot x^m$ (polynomial in x), Type V $X \cdot e^{ax} V$, Type VI $X \cdot xV$ (where V is function of x only).	6 Hrs.
Unit3	Applications of Linear Differential Equations with Constant Coefficients Introduction; Cauchy's homogeneous linear equations; Legendre's linear equations; applications to mechanical engineering and civil engineering.	6 Hrs.
Unit4	Partial Differential Equations Introduction; Formation of Partial differential equations by eliminating arbitrary constants and arbitrary functions, Direct Integration; Linear equations of first order (Lagrange's linear equations); Method of separation of variables.	6 Hrs.
Unit5	Vector Differential Calculus Introduction; Definition and types of vectors; Scalar point function and vector point function: Gradient, divergence and curl; Solenoidal and irrotational vector fields (Conservative field).	6 Hrs.
Unit6	Vector Integral Calculus Introduction; Vector Integration & its application: line integral, Work done, Circulation; Green's theorem, Gauss' divergence theorem and Stokes' theorem (without proofs).	6 Hrs.

Course Title: Applied Science I Course Code: NT262005			Course Category: BSC
Teaching Scheme		Examination Scheme	
Lectures: 03 hrs/ week		CA-1	10 Marks
Tutorial: -----		CA-2	10 Marks
Credits: 03		MSE	20 Marks
Semester: First Year (Semester II)		ESE	60 Marks
Course Prerequisite: - Basic knowledge of secondary and higher Physics - Basic knowledge of algebra and trigonometry			
Course Description: Physics is the backbone of all engineering disciplines. Physics is not just important in engineering, it's essential. It empowers engineers to understand the world, design with precision, innovate responsibly, and build solutions that improve lives. In structural analysis Physics is used in calculating stress, strain, and load distribution in buildings and bridges. In Soil Mechanics Physics is used for Understanding pressure and fluid flow through soils. In Earthquake Engineering Physics wave propagation is used to design earthquake-resistant structures. In Traffic and Water Flow Models, Physics is used for Applying fluid dynamics in drainage and water systems.			
Course Objectives: - To provide a firm grounding in the basic physics principles and concepts to resolve many Engineering and Technological problems. - To study the fundamentals of wave motion and optics. - To introduce the fundamental principles of quantum mechanics and nuclear physics, enabling students to study the behaviour of macroscopic & microscopic objects. - To provide a fundamental understanding of crystal structures and the principles of X-ray generation and diffraction. - To understand and study the Physics principles behind the development of engineering materials.			

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall the fundamental principles, laws and basic concepts of classical Physics and modern Physics.	Remember (Level 1)
CO2	Interpret the behaviour of macroscopic & microscopic objects using fundamentals of wave motion, Optics, quantum mechanics, crystal structure & electromagnetic waves.	Understand (Level 2)
CO3	Describe the properties of functional materials and the essentials of nuclear physics used in engineering systems.	Understand (Level 2)
CO4	Use fundamental principles and the laws of physical optics, crystallography and quantum mechanics in various engineering applications.	Apply (Level 3)
CO5	Apply fundamental principles of physics to perform experiments on optics, nuclear physics and material science for skill development through hands-on practice.	Apply (Level 3)
CO6	Examine the experimental behaviour of physical systems based on wave dynamics and optical effects.	Analyze (Level 4)

Practical (e)	Practical Performance and viva examination

Course Contents		
Unit 1	Wave Motion Oscillations: Free oscillation, damped oscillation, Forced Oscillation-Definitions, Applications. Acoustics: Introduction, Reflection of sound (reverberation and echo), absorption coefficient, Acoustical planning of building and factors affecting architectural acoustics of building. Ultrasonic Waves: Properties, Production of Ultrasonics waves: Magnetostriction method and Piezoelectric method, Applications, Numerical.	6 Hrs
Unit 2	Engineering Optics Interference: Interference, Types of Interference, Newton's ring- Formation, derivation of diameter. Lasers: Characteristics, Absorption, spontaneous emission and stimulated emission; metastable state, population inversion, pumping, resonant cavity, He-Ne Laser, Applications of Lasers Optical fiber: Structure, Principle, Acceptance angle, Acceptance cone, Numerical aperture, applications of fiber optics. Numerical.	6 Hrs
Unit 3	Quantum Mechanics & Nuclear Physics Quantum Mechanics: De-Broglie hypothesis of matter waves, Heisenberg's uncertainty principle, Schrodinger's time-dependent wave equation, Schrodinger's time-independent wave equation, Introduction to quantum computing (bits & qubits), Numericals. Nuclear Physics: Nuclear Fission & Fusion, Properties of α , β and γ rays, Geiger Muller Counter	6 Hrs
Unit 4	Crystal Structure and X-rays Crystal Structure: Fundamental concepts (lattice, basis, unit cell, crystal systems), Cubic structure: Number of atoms per unit cell, atomic radius, co-ordination number, packing fraction, Miller indices, Relation between p and a X-rays: Introduction to X-ray, X-ray diffraction, Explanation of Line and Continuous Spectrum of X-ray, Applications, Numerical.	6 Hrs
Unit 5	Newtonian Mechanics & Electromagnetism Newtonian Mechanics: Newtons laws of motion, Velocity, Work, Power, Energy- Law of conservation of Energy, Kinetic Energy, Potential Energy, Strain Energy. Introduction to Electromagnetic theory: Motion of electron in electric field, motion of electron in magnetic field, Motion of electron in cross field, Numericals.	6 Hrs

Course Title: Engineering Mechanics		
Course Code: NT262104		Course Category: ESC
Teaching Scheme	Examination Scheme	
Lectures:04hrs/week	CA-1	10 Marks
Tutorial:-----	CA-2	10 Marks
Credits:04	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: - Fundamental of Physics - Basics of Trigonometry, Geometry and Mathematical Rules and Regulation		
Course Description: Engineering Mechanics is the branch of Physics which deals with the study of the effect of force system acting on a particle or a rigid body which may be at rest or in motion with consideration of different laws, principle, theorem and mathematical rules and regulation. Engineering Mechanics is considered a basic subject for engineering students irrespective of branches, study of this subject helps develop the thinking, analytical ability and imaginative skill of the student. Engineering Mechanics is the basic subject which supports many other subjects like Strength of Materials, Theory of Machines, Kinetics of Machines, Dynamics of Machines, Fluid Mechanics, Fluid Machines, Machine Design, Tool Design, etc. to apply the engineering concept for manufacturing of various products and projects such as automobile, aircrafts, electric motors, robots, construction of roadways, railways, bridges, dams, power transmission towers, projectile of missiles, satellites and many more.		
Course Objectives: - To study the resolving forces and moments for a given force system - To locate Centre of gravity and Moment of Inertia of plane surfaces - To describe fundamental Laws and Conditions of static and dynamic equilibrium for given force system. - To compute the different motion characteristics of a body/particle with and without considering force causing motion		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recognize different fundamentals of Engineering Mechanics.	Remember (Level1)
CO2	Discuss effect of forces on rigid body/particle in statics and dynamics considering C.G.&M.I.	Understand (Level2)
CO3	Solve problems on rigid bodies/particle subjected to various forces in static and dynamic conditions.	Apply (Level3)
CO4	Examine beam reactions, frictional effects, truss behavior and composite areas under equilibrium conditions.	Analyze (Level4)

Course Title: Applied Engineering Course Code: NT262201			Course Category: PCC
Teaching Scheme		Examination Scheme	
Lectures: 02 hrs/ week		CA-1	10 Marks
Tutorial: -----		CA-2	10 Marks
Credits: 02		MSE	20 Marks
Semester: First Year (Semester II)		ESE	60 Marks
Course Prerequisite: - Basic Laws of Physics. - Basic Knowledge of construction materials (cement, steel, concrete, etc)			
Course Description: This course provides foundational knowledge of core concepts and applications in Mechanical and Civil Engineering. It introduces students to essential topics such as thermodynamics, automotive systems, jet propulsion, power plants, and construction principles. Emphasis is placed on real-world engineering practices, emerging technologies, and interdisciplinary innovation. Students will gain insights into professional roles, safety standards, and the use of basic civil and mechanical engineering tools and instruments. The course aims to develop practical understanding and prepare students for diverse career paths in engineering.			
Course Objectives: - To recall the roles, applications, various domains, current trends, different laws of thermodynamics, basics of I.C. engine and workplace safety and different measuring instruments in mechanical engineering. - To know the Hydraulic Structures, Types of Dams, Different barrages, Irrigation methods, Water Treatment Plant. - To understand different manufacturing processes, design thinking process, I.C. engine, jet propulsion and different power plants. - To summarize building materials, components and planning			

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall the fundamental principles and scope of Mechanical & Civil engineering, properties and uses of building materials and basics of hydraulics.	Remember (Level 1)
CO2	Explain the basics of thermodynamics, components of building and building plan layout, working and components of I.C. Engines, principles of jet propulsion systems and power plants.	Understand (Level 2)
CO3	Illustrate the performance of ideal and actual thermodynamic cycles such as Carnot, Otto, Diesel and Rankine.	Apply (Level 3)
CO4	Apply the principles of civil engineering materials, building planning, and hydraulics to select suitable construction materials, prepare basic building layouts, and identify appropriate hydraulic structures, irrigation methods, and water treatment processes.	Apply (Level 3)

Course Contents		
Unit 1	An Insight into Mechanical Engineering Introduction to Mechanical Engineering and roles of mechanical engineer, Revolutionary innovations and applications of mechanical engineering in various disciplines, Various domains of mechanical engineering and carrier paths, Current trends and future scope in mechanical engineering, Introduction to new product development (Design Thinking Process) and basic manufacturing processes, Workplace safety.	4Hrs
Unit 2	Basic Thermodynamics and Automotive Systems Introduction to thermodynamics, types of systems, Zeroth, first and Second law of thermodynamics with simple examples pertaining to respective branches, Basic terminology of I.C. Engine. Working of 2 and 4 strokes (Petrol and Diesel engine), Automotive system (Engine, transmission, steering system and brake systems), New technology in automobile industry (Electric vehicle, Hydrogen power vehicles working principle and parts)	4Hrs
Unit 3	Jet Propulsion and Power Plant Engineering Jet engine working principle and different parts, Aircraft system (Flight control system and landing gear system), Introduction to power plant engineering, working principle, block diagram and components (Steam power plant, nuclear power plant and Gas turbine power Plant)	4Hrs
Unit 4	Introduction to Civil Engineering and Building Materials Various Branches, role of civil engineer in various branches, Engineering properties and uses of materials: Soil, bricks, timber, stones, sand, aggregates, cement, steel, bitumen, glass, Mortar, Concrete, FRP, composite materials.	4Hrs
Unit 5	Building Planning and Its Components Principles of planning, Component of building and its functions, Foundation and superstructure, plinth, walls, lintels, beams, columns, Slabs, roofs, staircases, floors, doors, windows, sills, Study of Building plans, Ventilation, Typical building layout.	4Hrs
Unit 6	Introduction to Hydraulics Basic Introduction of Hydraulic Structures, Types of Dams, Different barrages, Irrigation methods, Water Treatment Plant	4Hrs

Course Title: Indian Knowledge System		
Course Code: GE262702		Course Category: HSSM-IKS
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs/ week	CA-1	10 Marks
Tutorial: -----	CA-2	10 Marks
Credits: 02	MSE	20 Marks
Semester: First Year (Semester II)	ESE	60 Marks
Course Prerequisite: None		
Course Description: This course provides a comprehensive overview of the Indian Knowledge System (IKS) by exploring the scientific and technological contributions of ancient and modern India across various domains. It covers the foundations of IKS with a focus on mathematics, astronomy, architecture, metallurgy, textiles, and agriculture. The course aims to foster awareness of India's intellectual heritage and its relevance to contemporary science and engineering. It encourages learners to critically appreciate the interdisciplinary nature and global impact of traditional Indian knowledge.		
Course Objectives: 1. To understand the foundational concepts and necessity of the Indian Knowledge System. 2. To identify key historical contributions of Indian scholars in mathematics, astronomy, architecture, metallurgy, textiles, and agriculture. 3. To interpret the scientific principles and techniques underlying traditional Indian practices. 4. To analyze the relevance of IKS in modern scientific and technological contexts. 5. To appreciate the global influence and sustainability of Indian innovations throughout history.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall key concepts, terminologies, historical developments, and contributions in Indian Mathematics, Astronomy, Architecture, Metallurgy, Textiles, and Agriculture.	Remember (Level 1)
CO2	Explain the principles, methods, and scientific basis of Indian Knowledge Systems in various domains such as mathematics, astronomy, architecture, metallurgy, textiles, and agriculture.	Understand (Level 2)
CO3	Use traditional Indian scientific and technological methods to address contemporary or theoretical problems in relevant fields.	Apply (Level 3)
CO4	Examine the relevance, strengths, and limitations of Indian Knowledge Systems in addressing contemporary scientific, environmental, technological, and societal challenges.	Analyze (Level 4)

Course Contents		
Unit 1	Indian Mathematics Necessity of Indian Knowledge System, Defining Indian Knowledge System, Contributions of Indian Mathematicians, Historical Evidence and features of Indian Numerical Number System, The Idea of Zero and Infinity, Decimal System, Representation of Large Numbers, Global Spread and Adoption of Indian Numericals, Arithmetic (Square of a Number, Square Root, Series and Propagation), Geometry (Simple Constructions from Sulba-Sutras, e.g., Right Angle Triangle, The Value of Pi), Trigonometry and Algebra in IKS, Modern Indian Contributions to Mathematics	4 Hrs
Unit 2	Indian Astronomy Historical Development of Indian Astronomy, Astronomy for Timekeeping, Solar and Lunar Motions, The Celestial Coordinate System, Various Regional Indian Calendar Systems, Planetary Model of Aryabhata and Nilakantha, Astronomical Instruments, Various Royal Endeavors for Astronomy (e.g., Jaisingh's Jantar Mantar), Modern Indian Contributions to Astronomy	4 Hrs
Unit 3	Indian Architecture and Town Planning Sthapatya-Veda and Vastu-Shastra, Historical Features of Indian Town Planning, Water Management and Drainage Systems, Town Planning of Harappan Cities, Temple Architecture, Features and Examples of Cave, Rock Cut, Nagara, Dravida, Kalinga, Vesara, Deccan, Rajput, Mughal, Indo-Saracenic Architecture Styles, Modern Indian Contributions to Architecture and Town Planning	4 Hrs
Unit 4	Indian Metallurgy Ancient Mining and Ore Extraction Technologies, Mining and Manufacture of Zinc, Copper and its Alloys, Silver, Gold, Mercury and Lead, Iron Extraction from Biotite, Steel Manufacturing, Global Influence of Wootz Steel, Wax Casting, Modern Indian Contributions to Metallurgy	4 Hrs
Unit 5	Indian Textile Textile Traditions in Ancient India, The Variety and Diversity of Indian Textiles, Types of Fabrics and Materials, Cotton and Silk, Weaving Techniques and Looms, Dyeing Process and Natural Colors, Major Textile Centers, Significance of Indian Textile in Historical Global Trade, Fall of Indian Textile in Colonial Era, Modern Indian Contributions to Textile	4 Hrs
Unit 6	Indian Agriculture Importance of Agriculture in Ancient India, Traditional Crops (Grains, Fruits, Vegetables Spices), Significance of Indian Agricultural Products in Historical Global Trade, Significance of Agriculture and Irrigation for the Indian Kings, The Ery System of South India, Traditional Farming Techniques (Land Preparation, Sowing Techniques, Weeding and Pest Management, Harvesting and Storage), Irrigation Techniques and Rainwater Harvesting, Modern Indian Contributions to Agriculture	4 Hrs

In structural analysis Physics is used in calculating stress, strain, and load distribution in buildings and bridges. In Soil Mechanics Physics is used for Understanding pressure and fluid flow through soils. In Earthquake Engineering Physics wave propagation is used to design earthquake- resistant structures. In Traffic and Water Flow Models, Physics is used for Applying fluid dynamics in drainage and water systems.			
Course Objectives: - To provide a firm grounding in the basic physics principles and concepts to resolve many Engineering and Technological problems. - To understand and study the Physics principles behind the development of engineering materials.			

Note: The Course Outcomes (COs) and the corresponding CO-PO mapping for this laboratory course are aligned with and detailed in the respective Theory Course Syllabus.

Assessment	
CA-I (a)	Based on practical: Sr. No. 1 to 4
CA-II (b)	Based on practical: Sr. No. 5 to 8
ESE (c)	Practical Performance and viva examination

Sr. No.	List of Experiments
1	Newton 's rings - Determination of the radius of curvature of Plano-convex lens /wavelength of light
2	Laser - Determination of the wavelength of He-Ne laser light
3	G.M. Counter - Determination of operating voltage of G.M. tube
4	Ultrasonic interferometer -Determination of the velocity of ultrasonic waves in different liquids.
5	Crystal Plane – Study of planes with the help of models related to Miller Indices.
6	Fiber optics - To determine the numerical aperture and acceptance angle of an optical fiber
7	Torsional Pendulum: To determine the elastic constant of the wire(Y) and rigidity modulus(η) of a given metal wire by using the Torsional Pendulum. (Searle's method)
8	Hysteresis Loop-B - H Curve Experiment

Course Title: Workshop Practices		
Course Code: GE262105		Course Category: ESC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester II)	ESE	20 Marks
Course Prerequisite: Students should possess fundamental knowledge of basic science and mathematics from secondary education and must demonstrate an interest in understanding tools, safety protocols, and workshop processes. They should be ready to engage in hands-on learning involving measurement, marking, material handling, and elementary fabrication using standard workshop tools and equipment.		
Course Description: This course is designed to equip first-year engineering students from non-circuit branches with foundational skills in workshop practices essential for real-world engineering applications. Emphasis is placed on safety protocols, correct use of personal protective equipment (PPE), and the handling of common tools and materials. Through hands-on experience in fitting, carpentry, sheet metal, and plumbing operations, students will learn to measure, mark, cut, assemble, and evaluate basic engineering components. The course builds practical competence and fosters an understanding of how mechanical and civil structures are fabricated and assembled in industrial and construction environments.		
Course Objectives: - To inculcate safety consciousness through knowledge and demonstration of Personal Protective Equipment (PPE) and workshop hazard protocols. - To train students in accurate measurement, marking, and metalworking skills using standard fitting tools. - To develop competency in fundamental carpentry skills required for basic construction joints. - To impart sheet metal fabrication techniques essential for creating basic utility components. - To introduce practical plumbing operations including cutting, threading, and layout for basic pipework systems.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall fundamental workshop safety guidelines, correct use of personal protective equipment (PPE), basic first aid awareness, and safe handling and storage of tools and materials.	Remember (Level 1)
CO2	Explain the objectives, principles, and standard procedures of basic workshop processes such as measuring, cutting, joining, assembling, and finishing.	Understand (Level 2)
CO3	Apply foundational fabrication and assembly skills to create simple functional products or structures using appropriate tools, equipment, and techniques.	Apply (Level 3)
CO4	Analyze fabricated components and assembled circuits for dimensional accuracy, functionality, safety, and quality, and identify suitable corrective measures.	Analyze (Level 3)

Civil Engineering

Course Title: Programming for Problem Solving Lab		
Course Code: NT262106		Course Category: ESC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 04 Hours/Week		
Tutorials: 01 Hours/Week	CA-I	30 Marks
Credits: 03	CA-II	30 Marks
Semester: First Year (Semester II)	ESE	40 Marks
Course Prerequisite: Students should have basic computer literacy and a fundamental understanding of Class XII mathematics, including arithmetic, algebra, and elementary functions.		
Course Description: This course introduces students to the fundamentals of programming and computational problem-solving using Python. Students will learn to analyze problems and develop solutions using algorithms, flowcharts, and pseudocode before implementing them through Python programs. The course covers essential programming concepts such as variables, data types, operators, decision-making, loops, functions, data structures, strings, and file handling. It also introduces debugging, exception handling, and techniques for developing reliable and robust programs. Through hands-on practical exercises, students will apply Python to basic mathematical, numerical, and Mechanical Engineering problems and gain introductory exposure to NumPy, Matplotlib, Pandas, and scientific computing.		
Course Objectives: 1. Develop computational thinking and problem-solving skills by analyzing problems and representing solutions using algorithms, flowcharts, and pseudocode. 2. Apply fundamental Python programming concepts such as variables, data types, operators, decision-making, loops, functions, and data structures to solve computational problems. 3. Use Python for basic engineering computation and data handling through file processing, NumPy, Matplotlib, Pandas, and introductory scientific and numerical computing. 4. Develop reliable and structured Python applications using debugging, exception handling, object-oriented programming and integrated programming techniques to solve simple mechanical engg. problems.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Understand the fundamental concepts of Python programming, including variables, data types, operators, control structures, functions, and basic data structures.	Understand (Level 1)
CO2	Explain problem-solving approaches, debugging techniques, exception handling, file handling, and basic object-oriented programming concepts using Python.	Understand (Level 2)
CO3	Apply Python programming concepts and scientific computing libraries such as NumPy and Matplotlib to solve basic numerical and engineering problems.	Apply (Level 3)
CO4	Analyze engineering problems and select appropriate Python programming constructs, data structures, and computational techniques to develop and evaluate solutions.	Analyze (Level 4)

Assessment	
CA-I (a)	Performance & Evaluation of Practical
CA-II (b)	Performance & Evaluation of Practical
ESE (c)	Practical Performance and Viva exam

	List of Tutorials
1.	Foundations of Computing & Problem Solving
2.	Datatype, Variables & Expression
3.	Control Flow: Decisions
4.	Control Flow: Repetition
5.	Functions & Modular Thinking
6.	Data Structures for Organizing Information: List, Tuple, Set, Dictionary
7.	File I/O & Data Handling
8.	Errors, Debugging & Robust Programs: Exception Handling
9.	Introduction to Scientific & Numerical Computing
10.	Object-Oriented Programming

Sr. No.	List of Experiments
1.	To set up the Python programming environment and implement basic Python programs using input and output operations.
2.	To implement basic problem-solving techniques using algorithms, flowcharts, and pseudocode and translate them into Python programs.
3.	To implement programs using variables, constants, data types, and type conversion in Python.
4.	To implement arithmetic, relational, logical, and assignment operators and evaluate Python expressions.
5.	To implement decision-making programs using if, if-else, and if-elif-else statements.
6.	To implement programs using nested and compound conditional statements for solving real-world problems.
7.	To implement iterative programs using for loops and range() for solving numerical problems..
8.	To implement programs using while loops, nested loops, and loop-control statements.
9.	To implement user-defined functions using parameters, arguments, default arguments, and return values.
10.	To implement modular programs using functions, scope, and basic recursion.
11.	To implement programs using Lists and Tuples for storing and processing collections of data.
12.	To implement programs using Sets and Dictionaries for organizing and managing data.

Course Title: Professional Development II		
Course Code: GE262602		Course Category: SC-SEC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester II)	ESE	20 Marks
Course Prerequisite: - Completion or familiarity with Professional Development I - Basic proficiency in English and willingness to develop professional skills further.		
Course Description: This course advances students' professional competencies by focusing on leadership, teamwork, time and goal management, and advanced communication techniques. The practical activities foster self-awareness, effective collaboration, critical thinking, and written communication skills essential for academic and career success.		
Course Objectives: - To help students recall essential terms, concepts, and components of leadership, time management, teamwork, and professional communication. - To help students understand key concepts of personal effectiveness, leadership, and communication in professional settings. - To enable students to apply practical skills in teamwork, time management, goal setting, and professional communication. - To encourage students to create structured and effective oral and written communication tailored to professional needs.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall key terminology, concepts, and components related to leadership, time management, teamwork, and professional communication.	Remember (Level 1)
CO2	Explain fundamental principles of leadership, time management, teamwork, and effective communication.	Understand (Level 2)
CO3	Apply essential professional skills such as role playing, presentation, email writing, and rapid reading in real-life scenarios.	Apply (Level 3)
CO4	Create structured written and spoken communication outputs such as essays, emails, and presentations for professional contexts.	Create (Level 6)

Teaching Scheme	Examination Scheme	
Practical/Sessions: 02 Hours/Week	CA-I	15 Marks
Credits: 01	CA-II	15 Marks
Semester: First Year (Semester II)	ESE	20 Marks
Course Prerequisite: None. An open mind and willingness to work in diverse teams is essential.		
Course Description: This course introduces students to the fundamentals of platform-based development using Arduino microcontrollers, basic electronics, sensor-actuator interfacing, and simple mechanical mechanisms. Through a hands-on, project-based approach, students explore embedded systems, basic programming logic, and circuit building while integrating sensors and actuators with wireless communication modules. Additionally, the course familiarizes students with real-world mechanical linkages and their applications. By the end of the course, students will be able to build and troubleshoot simple, intelligent physical systems by combining electronics, programming, and mechanical design elements.		
Course Objectives: 1. To understand the basics of embedded systems and microcontrollers. 2. To develop skills in Arduino programs and circuit interfacing. 3. To integrate sensors, actuators, and communication modules in simple projects. 4. To foster creativity, problem-solving, and teamwork through practical engineering challenges.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Recall and identify basic components of embedded systems and Arduino hardware platforms.	Remember (Level 1)
CO2	Explain the functionality of Arduino software platforms and basic electronic components.	Understand (Level 2)
CO3	Construct and test simple Arduino circuits using LEDs, switches, and sensors.	Apply (Level 3)
CO4	Analyze and troubleshoot embedded system circuits and Arduino programs for faults.	Analyze (Level 4)
CO5	Design and develop a complete embedded system integrating sensors, actuators, and communication modules for a specific application.	Create (Level 6)

Course Title: Students Club Activities		
Course Code: GE262902		Course Category: LLC
Teaching Scheme	Examination Scheme	
Practicals/Sessions: 02 Hours/Week	CA-I	25 Marks
Credits: 01	CA-II	25 Marks
Semester:	ESE	-
Course Prerequisite: Active Membership in Any Institute-Approved Student Club		
Course Description: This co-curricular course provides a professional platform for students to foster leadership, teamwork, and specialized domain skills through active engagement in Institute-approved student clubs. Designed as a flexible workplace simulation, the curriculum accommodates diverse student roles by focusing on the core competencies of organizing and/or participating in campus-wide technical, cultural, or social initiatives. Students learn to navigate peer-to-peer collaboration, manage timelines, and achieve targeted outcomes, turning active extracurricular involvement into verifiable workplace readiness and project management experience.		
Course Objectives: - To instruct students in the governance, compliance guidelines, and operational frameworks of managed student organizations. - To train students in the practical workflows of event planning, resource optimization, task execution, or technical skill application. - To facilitate hands-on experience in cross-functional collaboration, communication, and risk mitigation through live club initiatives. - To establish professional documentation habits through the evaluation of outcomes, logbooks, and structured activity reporting.		

Course Outcomes:		
COs	After completion of the course students will be able to	Bloom's Level
CO1	Interpret the institutional governance, compliance workflows, and safety frameworks required by the Student Affairs Department to run or join campus initiatives.	Understand (Level 2)
CO2	Apply specialized domain-specific skills (whether technical, creative, or social) to deliver structured project milestones or performances within a club ecosystem.	Apply (Level 3)
CO3	Collaborate within professional peer hierarchies, managing shared resources, event timelines, and stakeholder communication to execute club objectives.	Apply (Level 3)
CO4	Formulate comprehensive, data-driven post-activity portfolios including financial logs, attendance metrics, and official reports	Create (Level 6)

Assessment	
CA-I (a)	Organization and/or participation in the Club Activities
CA-II (b)	Organization and/or participation in the Club Activities

Students Club Activities
Students are expected to maintain active membership in at least one Institute-approved student club, engaging in initiatives that can range from regular weekly sessions to major one-off events. These club activities can span diverse domains, including technical workshops, cultural performances, and social responsibility campaigns. To ensure academic and administrative compliance, all events must be formally approved by the Student Affairs Department and secure all other necessary institutional permissions before execution. Throughout the semester, students must successfully organize and/or participate in these scheduled club activities to develop real-world leadership and teamwork skills. To receive academic credit for the course, students are required to submit verifiable proof of their involvement when requested. This documentation may include official event reports, attendance records, completion certificates, or activity logbooks, providing clear evidence of their direct contributions.
